# Foreword

The main purpose of the Directory is to provide university graduates and placement officers with information on employment opportunities in Canada. This publication is also distributed to Canadians studying abroad and to officers of the Department of Manpower and Immigration serving overseas.

The Professional and Technical Occupations Division produces other publications relating to post-secondary education. These include:

University Career Outlook  
Community College Career Outlook  
New University Graduates — Supply and Demand  
Requirements and Salaries — University Graduates  
Requirements and Salaries — Community College  
Graduates

Any comments or suggestions you would like to make regarding this publication may be sent to:  
Graduate Requirements Section,  
Professional and Technical Occupations Division,  
Department of Manpower and Immigration,  
Ottawa K1A-0J9 Ontario

## How to use this directory

This Directory has three main sections: a narrative, an alphabetically-arranged listing of Canadian employers, and a series of cross-indexes as a guide to the list of employers.

Each entry in the alphabetical listing gives the name of an employer, the address, the name of the officer responsible for recruiting degree-level staff, and a brief description of the employer. As far as possible, a standard format has been used for all employer descriptions.

Each contains three main headings apart from the employer's name and address: "Activity", "Requirements", and "General Information". "Activity" describes what the employer does, "Requirements" lists the areas of study and degree levels of potential applicants, and "General Information" contains other relevant information. As far as possible, the only abbreviations used are "B", "M", "D", and "S", meaning Bachelor's, Master's, Doctoral degrees, and summer employment, respectively. However, a few standard phrases which have been used throughout the Directory may require clarification.

Where "summer employment" is mentioned, it refers to employment in work related to a discipline of study. The employer may hire vacationing students to work in other capacities, but this cannot be determined from information given in the Directory listing.

References to an employer's language requirements do not refer to an applicant's native tongue. "Requires French-speaking personnel" or "Requires English-speaking personnel" neither mean nor imply that an applicant's native language must be either French or English.

The listing of employers is cross-indexed in three ways:

- 1) by type of employer;
- 2) by fields of study and degree levels required; and
- 3) by city and province

IF YOU KNOW THE NAME OF THE EMPLOYER TO WHOM YOU WISH TO APPLY, SIMPLY LOOK UP HIS LISTING IN THE ALPHABETICAL SECTION. HOWEVER, IF YOU ARE INTERESTED IN ANY EMPLOYER WHO MIGHT HIRE GRADUATES FROM YOUR AREA OF STUDY, OR AN EMPLOYER IN A PARTICULAR LINE OF WORK, OR AN EMPLOYER LOCATED IN A SPECIFIC CITY AND PROVINCE, THEN THE CROSS-INDEX MAY BE CONSULTED. THE LAYOUT OF THESE CROSS-INDEXES IS SHOWN IN THE TABLE OF CONTENTS ON PAGE iii.

MINISTER OF  
MANPOWER AND IMMIGRATION

MINISTRE DE LA  
MAIN-D'OEUVRE ET DE L'IMMIGRATION

Canada, together with other nations, is undergoing a period of great change. Established systems and mores are being questioned as never before and at the same time, the individual is struggling to retain his identity in an era of rapidly changing technology.

It is you, the graduate, who must face the challenge presented by these circumstances. You must preserve what is beneficial from the past yet come forward with new ideas and concepts which will enable all Canadians to live in a participating democracy and enjoy the many advantages our country has to offer.

This directory, which lists a wide range of prospective employers, has been designed to assist you in choosing employment suited to your qualifications which I hope will lead to a satisfying and rewarding career.

# Introduction

The Directory includes three feature articles by managers of on-campus Canada Manpower Centres. The major part of this publication, however, consists of employer profiles which give a description of the business or activity of employers and the type of graduates they require by degree level.

Indexes and cross-references are provided to facilitate easy usage of the information that is being supplied on employers and employment opportunities. In addition, a guide "How to use this Directory" appears on page iv.

Enrolments at Canadian universities and community colleges have been showing substantially steady increases each year. For the 1970-71 academic year there were approximately 330,000 students enrolled at Canadian universities. Students in teachers' colleges and those in the pre-university level at Quebec public colleges are not included in this number. Community college enrolments were approximately 130,000.

Figure 1 illustrates enrolments at Canadian institutions of higher education for the academic years 1959-60 to 1970-71. It is of interest to note that, while enrolments at the different university degree levels increased steadily enrolments at community colleges experienced only a slight annual increase up to the 1966-67 academic year. However, between the academic years 1967-68 to 1970-71, community college enrolments experienced a substantially higher increase than the university enrolments for the same period due to the integration of certain other post-secondary institutions with some community colleges. This is particularly the situation in the province of Quebec, where a large number of the students in the C.E.G.E.P. system are actually university transfer-students and may continue university work following graduation from a C.E.G.E.P.

# Scholarships, Bursaries, and Loans

The financial burden involved in attending university is heavy and is becoming heavier every year. However, funds are available from a number of sources to lighten the load, although government loan plans provide the main share. Many universities, agencies, interested organizations, and individuals offer scholarships, bursaries, and loans to help support university students.

The Dominion Bureau of Statistics publication, "Awards for Graduate Study and Research", lists awards which are available to those undertaking graduate studies. As many of these awards are made to more than one person, the actual number of individual awards is much higher than might appear at first glance. As well, many of the organizations making these awards make similar funds available to undergraduates.

Bursaries are available from many sources, but probably the main source is the universities themselves. All, or nearly all, Canadian universities have limited funds available to provide grants to needy students, as do some service clubs and other organizations.

In addition to these sources, most of which provide non-repayable funds, other financial assistance is available to university students. The university usually has a limited amount of funds set aside for emergency, short-term loans (which are, in many cases, interest-free). The Canada Student Loan Plan, administered by the provinces, guarantees loans to eligible students and pays the interest on them until the student has completed his studies. As well as assuring an adequate source of money, this plan allows students a favourable rate of interest.

Information regarding any of the above can be obtained from the financial awards officer of any university.

# M. G. P. Henderson

## Biographical Sketch

G. P. Henderson, Manager of the Canada Manpower Centre at Macdonald College, was born in 1934 in Quebec, and was raised in southwestern Ontario. He received the B.A. degree in Political Science from Sir George Williams University in 1968 after a number of years away from school.

Mr. Henderson has been a Manpower Counsellor and then Manager for five years at Macdonald College and was a National Employment Counsellor for five years prior to that in Executive and Professional and in General Placement at London, Ontario.

Before joining the Public Service, Mr. Henderson was employed in the construction industry and in the newspaper and broadcasting field in Sarnia, Ottawa, Toronto, London, and Montreal. He is one of a very small number of persons in Canada working in the field of professional agricultural placement.

# Agriculture and the world of work

(A HOT ISSUE)

When I was asked to write this article and bearing in mind that it was to appear in a government journal, I started with two drafts explaining the romance, excitement, and the philosophical position of agriculture and career possibilities in to-day's world.

However, this approach does not reflect the true nature and appeal of agriculture as a field of work. Agriculture is a basic gut issue. True, most of you will think agriculture is only farming and all that that entails, and my original writing would not have changed that. Perhaps this article will not either, but its purpose has been changed — to stress the real challenges of work in agriculture. I ask only that you read the article with an open mind. I, in turn, will try to be as honest as anyone who feels strongly about a career area can be. This article is intended to assist you in making a decision and is not intended to sell you a bill of goods, to persuade you, or even gently to coerce you.

Agriculture is not all farming, but it deals in a thousand ways with the farm, its produce, its community, and its problems, and is consequently governed by the hardest of our society — the law and force of nature. This means to a large extent peak periods which demand all a man or woman has to give, and at other seasons periods which slack off to almost nothing. There is no doubt that agriculture can be very routine and repetitive much of the time. It needs people who find a challenge in work, nature, and then more work.

When you deal with weather, disease, and pestilence, but which much is still unknown, you deal with problems not encountered in most other industries. To even contemplate a career in agriculture, one must possess great resilience, the resilience to return from disappointment with new vigour and tenacity. The only way to succeed in the agricultural field is with tenacity — instant holding to your direction — and that includes the farmer, the researcher, the agricultural engineer, the extension man, the agricultural financier, and the broadcaster. To those who love the outdoors, agriculture will be attractive, but to those who want the office, the grey flannel image, and the social whirl, agriculture may

not be overly appealing. Men and women who wish to practise within the field of agriculture must consider that, as in all professions, there may be certain drawbacks.

Persons considering an agricultural career must be able to face daily challenge — the challenge of spoiling meat, overnight frost damage, destruction of crops by pests, periods of peak workloads, and periods of time devoted to planning and preparation. One must be a self-starter because constant supervision is impossible. There are, of course, other problems but these exist in one form or another in most careers.

I will try to point out some of the challenges to be found in an agricultural career and the areas of training designed to meet these challenges. If you find an interest in the field, you will be able to investigate further and accept or reject the challenge.

The end of an era of discovery has been reached in North America. We now know our continent. This knowledge is perhaps best exemplified in agriculture. We have established new crop varieties, new methods of soil management, and new controls for pests and disease. In fact, we have been so successful that we have achieved a surplus, and for some products have had to reduce production, now that other countries are able to supply their own foodstuffs to such an extent that there is a reduction in the economic possibilities for trade.

We now know our limits, and we know that we no longer have unlimited resources. The practices which were once tolerable no longer are. We have too little good land and too little clean water. The problem is not so much to develop new resources as to protect and restore the ones we have. This presents a tremendous challenge to all scientists, but particularly to those involved in agriculture.

Several professors from Macdonald College have just completed a world-wide study of the problems facing agricultural faculties and the intensive, exciting changes which are taking place the world over. Agriculture in the old sense is giving way to new fields of environmental sciences and resource development, and the agricultural schools are changing curriculum equally fast to keep pace. New people are entering the field — political scientists who fight for new environmental legislation; sociologists who seek to solve the problems of the great rural isolation of youth, and more and more scientists who must deal with not how to increase the quantity and quality of milk but how to package and distribute this commodity, or how to assist in increasing food production to feed an exploding population.

In examining agriculture, one must realize its great contribution to society. To eat is to be concerned with agriculture, to swim in or to drink pure water is to be concerned with environmental studies, and to breathe clean air, harvest the forest, or tread on green grass, is to be vitally immersed in agriculture and its problems. To be specific, let us first destroy the idea that to farm is not worthy of the degree holder. Agriculture can no longer be thought of as a pleasant 100 acres, a few cows, some good vegetables, and a quiet life. During the sixties with politics, youth, and the media trying to change society at a cultural and moral level faster than many can accept, agriculture had already changed. The new farms are almost co-operative in nature, from one to five thousand acres and mass producers of foodstuffs. Such farms may take several degree men as well as technologists to operate and can cost a \$1,000,000 or more to maintain at

a profit. Young men to-day starting into smaller food producing units are looking to the farm credit associations for money starting at \$50,000. This is not a job for the untrained and uneducated amateur. Profit is too slim and the world needs food too badly for us to gamble on such amateurs.

Present changes in our society and our great concern with ecology has produced an ever-increasing need in the wide spectrum of agriculture for graduates in disciplines other than that of agriculture. There are hundreds of jobs in agriculture, such as in agri-journalism in both writing and broadcasting where a background in journalism or any of the liberal arts is invaluable. Because we have to train agriculture graduates to write for publication, it would also seem as important to train competent writers about agriculture. Before the public can be activated, it must be informed, and it is essential that the people involved in this area of information be not only competent in agriculture and writing, but also be concerned with the problems of rural and urban living.

The field of engineering has been opening areas in agriculture never dreamed of five years ago. This development has brought a demand for the resources of the bright and inventive young graduates to ensure that future development will be rapid and that the people of emerging nations and regions will get the assistance they need to advance. The agricultural engineer and engineers in general face such challenges as the reduction of sea water to pure water, on a large enough scale to irrigate vast desert areas. The mechanical engineer faces the great problem of moving perishable goods halfway around the world at low cost and in large quantities. As well, he must enter the processing plants of the world and apply his creativity to streamlining production and reducing the consumer cost, thus bettering standards of living for everyone. The problems of food freezing, computerizing data, and finding ways to use electrical power to modernize the whole farming process are among the projects demanding the attention of the electrical engineer.

Of course, there is the field of sales. For years people have been discussing this, probably the largest area of career entrance employment. It has been said that sales does not seem suited to the sophisticated degree holder. And yet, the opportunities for men with a science degree are unlimited. In fact, almost any academic background is a foundation for agricultural sales or sales in the agricultural community. Salesmen are the people who make the researcher what he is; who prove the administration's theory; who support the production man, and who generally display the worth of any particular industry or organization to society. People of science training are daily, through sales, aiding companies, countries, and the world to produce necessary commodities faster, cheaper, and better, thus improving individual standards throughout the world. Obviously career opportunities in this field are unlimited with international, national, and local agricultural firms recruiting annually to find sales potential.

Commerce and Business Administration graduates find a constant challenge in the huge number of organizations involved in the broad agricultural field. These firms provide not only all types of business challenge, but they also offer excitement and stimulation because they are concerned with the problems of agriculture. Certain firms involved in agriculture or the bio-sciences are also

looking for more experienced senior graduates from Canada's M.B.A. schools.

At this point, let us consider the vast number of agricultural positions which take a basic training in the agricultural sciences, or, to be more specific, those available to graduates holding a B.S.A. degree or in some cases a M.Sc. (Agr.) degree. These graduates are needed for specific jobs such as extension in both the federal and provincial governments, in inspection work, in the food and food products industry, in major agricultural firms dealing with specific areas of the farm community, and in other research in agriculture and bio-science fields.

At the same time, as graduates of other disciplines are necessary in the agricultural field, this group of people trained in agriculture are sought by industries and organizations outside the specific area of agriculture. For example, the federal government has recently appointed Jack Davis to the portfolio of Minister of the Environment, and as his Deputy, Robert Shaw, famed for his brilliant administration of Expo 67 and, more recently, as Vice-Principal of McGill. These men are well-qualified to set policies for the protection of our environment, and they would be the first to acknowledge the need for people trained in bio-science or agriculture to pinpoint the major problem areas and to give them a basis for creating sound policy.

Banks making rural loans need people to train as accountants who can make agricultural assessments, the kind of assessments based not only on economic considerations but also on the dilatorious effect of weather and soil conditions and other problems facing the food producer. Retail companies need agricultural engineers to assess and promote the sale and use of the products of our greatelters for agricultural purposes. The reasons why the large automobile and farm machinery manufacturers look for agricultural engineers is self-evident. It may be less evident to the agricultural graduate why the newspaper and broadcast industries are looking for people trained in agriculture. It is simply that two-thirds of Canadian broadcasting is involved with eating, breathing, and maintaining a bio-life standard. The people who work in

this field or on newspapers must know the right questions to ask and be able to understand the implications of the answers to their questions.

It is necessary here to point out the great need for people educated at the graduate level for research work. A large number of graduates is not absolutely necessary, but those who are doing graduate work with some direct and immediate significance to our society are most needed. Therefore, as new graduates at the first degree level start their career search, they may be advised to look to a field that in the future may lead back to graduate school.

An immediate start in graduate work is not necessarily desirable, so some areas of work for several years before graduate study will, in all likelihood, assist in a better and more interesting selection of study at the graduate level. Agriculture and all its facets, in particular environmental and resource studies, provide a tremendous graduate field if explored with wisdom.

Here, I return to agriculture and the world of work. Employers are looking for "good men". This means men or women, and it does not entirely depend on the type of degree or the grades achieved. "Good men" means men with creative ability, with a sense of purpose, a willingness to work, and a desire to achieve again and again.

Agriculture presents all the challenges necessary to an individual in a changing society — stimulating work, wide possibilities for varied training, relevance, and a basic issue. The title under which I wrote was uninspiring — Agriculture and the World of Work. Perhaps it should be Agriculture is the World's Work. If you have the creativity, originality, training, and the ability to work and mean it, try agriculture!

# Emile Simard

## Biographical Sketch

Emile Simard was born and educated in the city of Quebec. Following service as an officer in the Canadian Army during World War II, he joined the National Employment Service. In 1954, Mr. Simard was assigned to the Student Placement Service at Laval University and was appointed Director in 1958, a position he still retains.

Mr. Simard has been very active in organizations directly involved with student placement. From 1968 to 1970, he was a member of the College Placement Council Inc., the United States; President of the University and College Placement Association from 1969-70; President of the Council of Associations of University Student Personnel Services from 1970-71, and is a life member of the Laval Alumni Association.

cause an interview with an employer is a selection mechanism — selection of an employer or selection of an employee — it is very important that the choice be a free one made on the basis of objective knowledge. Knowledge will not change reality, but it does enable the person who knows to identify himself with the known object. This knowledge is the link between the person who knows, namely the student, and the known object, namely the potential employer.

### Why the Interview?

The aim of the interview is to arrive at a genuinely free choice, in full awareness of all the objective and personal elements of the situation. So far as this knowledge and awareness is concerned, four stages may be distinguished in the meeting between a prospective employee and a potential employer.

Getting to know each other, which is that first contact during which the two parties become aware of the personal characteristics of the other. At this time, the employer can consider what sets this candidate apart from any other applicant. For the student, it means meeting an individual who is representative of an employer.

Each of the two parties tries to get a deeper insight into the characteristics of the other. This stage consists not only of gathering information, but also of integrating that information with other personal factors. This contributes towards dispelling certain prejudices, and towards choosing more specific options.

The third stage is one of evaluation, essentially for the purpose of finding out whether the parties suit each other. For the candidate, it is a time of assessing the position, to see whether it matches his requirements, aspirations, and aptitudes.

It does not necessarily follow that an immediate choice or decision must be made during the interview, but rather that, without it, a definite choice cannot possibly be made. That, then, is the aim of the interview.

### What is the Interview?

#### A Mental Picture

The best way to describe the interview is to compare it with a meeting between two salesmen who want to sell their product to each other. That is what the game of supply and demand is all about.

Just as any two honest salesmen would normally do, they each must first evaluate the need of the other. Does he need the product? How much of it, and of what quality?

Once an understanding is reached as to the needs of each salesman, the stage is set for negotiation of the barter contract.

#### Description of a Typical Interview

- a) **Preliminaries** — The student is referred to the employer, who takes cognizance of his application for employment.
- b) **Proceedings** — This is the question period between the employer and the student, a dialogue by which they will get to know and understand each other better. At the same time an opportunity for self-evaluation is provided.
- c) **Conclusion** — Some agreement is reached concerning subsequent procedures. Will there be further interviews or an exchange of correspond-

# How to prepare for an interview

or

THE MORE YOU KNOW, THE WISER YOUR CHOICE!

ence? Time limits must be determined, and an arrangement made for mutual communication of decisions.

### How to Prepare

#### 1) Long-term Preparation

- a) Take an interest in the labour market from the start of your studies.
- b) Consult the University Counselling and Placement Services.
- c) Plan to be in a position of having a quality product to offer, become involved in your field of study, and go beyond of your special subject. Acquire a well-balanced personality and a realistic set of values.
- d) Shoulder your responsibilities.

#### 2) Immediate Preparation

- a) Fill out an application for employment which projects an image of what you are.
- b) Ensure that your presentation is a reflection of your personality.
- c) Get information on the employer, the economic sector and area in which he operates, and, if possible, his philosophy.
- d) Consult the documentation that is available at the Placement Service, so as to bring your aspirations into focus with the idea of fulfilling them in the enterprise of the prospective employer.
- e) If possible, obtain information on specific facts such as conditions of employment, atmosphere of the working environment, promotional opportunities, spheres of specialization, development programs, and so on.
- f) Prepare definite questions.

### Conclusion

One cannot choose without having sufficient knowledge. That is why your University Placement Service is offering you its co-operation in seeking a suitable job and preparing your interviews. The purpose of the Service is to help you. If you are sufficiently well informed about the world of labour and the available jobs, it will then be easy for you to decide what field of activity is most likely to satisfy your ambitions and ensure maximum scope for the development of your potential.

# M. Bill Roberts

## Biographical Sketch

Bill Roberts has served with the National Employment Service and the Department of Manpower and Immigration for 20 years. He was initially with the Insurance Branch at Pacific Region and Vancouver local offices but transferred to Placement and Employer Development in the Employment Branch. During the latter part of the period he worked part of each year in the University of British Columbia Student Placement Office and has been in charge of the Simon Fraser University CMC since the University opened in 1965.

Born in Galt, Ontario, Mr. Roberts has spent most of his life in Vancouver where he attended the University of British Columbia and Simon Fraser University. As a veteran of the Second World War, he had five years' overseas service with the Seaforths, as well as 25 pre and post-war years with the same militia regiment. He retired with the rank of Major.

Mr. Roberts is married with three children, and lists golf, fishing, and the British Columbia Rifle Association as his hobbies.

# Job seeking

Along its educational programs, Simon Fraser University now includes a seminar in job seeking. Students are taught basic facts about the labour market. They learn how to evaluate their skills and to relate them to the world of work. They learn to prepare a resume, how to conduct a systematic search for employment and, at the same time, are gaining motivation in job seeking. At Simon Fraser University, students are taught the "Creative Job Search Technique" in small group seminars by a Canada Manpower Counsellor. The seminars are there adapted and condensed into one session the group counselling provided to clients by Canada Manpower Centres throughout British Columbia.

The course is advertised to students in such phrases as "Structure your search for suitable employment", "Learn how to evaluate your potential", and, "You **can** find the job of work you want if you know how to look for it in a systematic way". Each seminar has been attended by 10 to 15 students from all faculties and at many levels of undergraduate and graduate study. This is an ideal size for one counsellor and the variety of students brings forth some excellent discussion and exchange of ideas.

The participants are informed that the program is not intended to provide them with employment but to tell them how to find their own jobs. They are told that the normal staff attrition rate of 3 per cent makes hundreds of jobs available every day and that if they plan their job search carefully and systematically, they can find work in a few days or weeks. A person who relies only on others to find a job for him is usually unemployed longer than necessary.

Students then participate in a discussion on where employers look for new staff. They have many theories on this subject, such as newspapers, friends, employment agencies, unions, or Canada Manpower Centres, but are usually surprised when informed that the major source is still personal contact. They learn that they should utilize all of these sources in a determined effort and that applying for work is a full-time occupation. A working week is usually 40 hours, and the search week should similarly be eight hours a day, five days a week.

It would be difficult to get 40 appointments with employers within one week, but no matter how long it takes, 40 interviews is the magic number. Experience in this program has shown that 40 interviews can provide at least two or three offers of employment. One young girl in Victoria went to a newly-constructed building and, starting at the top floor, made application to every company. She finished her day with several jobs available to her.

A resume outline, a group of sample resumes, and a personal inventory sheet are given to each student, and the group is told about their homework which can take up to 20 hours. Each employer interview must be accompanied by a resume, so 40 resumes must be prepared.

Before writing this resume, however, it is necessary to complete a personal inventory composed of the following six questions. They are:

1. What things have I done to any degree of success?
2. What things have I done that others have complimented me for doing in an exceptional manner?
3. What jobs have I held? Describe in detail.
4. What equipment can I operate?
5. What things do I really like to do?
6. What things do I really not like to do?

Each of these must be answered fully and carefully in the four areas of unpaid work, paid work, study, and play. This may call for a lot of brain searching, but perhaps a new person will appear from the facts brought out of a forgotten past. In any case, with the assessment completed, students should be able to consolidate the results into a comprehensive resume.

The students are told that many employers make their decision about whether to hire or not to hire in the first few minutes of the interview. Therefore, some time should be spent on general appearance and grooming. It has also been proven that an interviewer tends to discount part of the spoken word but has a greater belief in a written statement. A resume will also assist the student who perhaps lacks self-confidence and has difficulty in selling himself. The story is told about the skilled immigrant who had been unsuccessfully looking for work for months. He stuttered badly. Then he presented resumes to about six employers and had three job offers.

This Directory furnishes the names of companies to whom the student should apply, and the information on their activities is an essential part of the plan. Every university CMC has a Careers Library containing job descriptions, information about companies hiring undergraduate and graduate students, and a variety of labour market information. Manpower counsellors are also available to assist with advice and instruction. In addition, the students are advised of other sources of employer leads such as the advertisements for specific positions which appear from time to time on the financial pages of leading Canadian newspapers.

Students attending the sessions are from all parts of the university population and do not always have the same employment objectives. However, most of them are preparing to look for permanent employment, though some undergraduates are seeking semester employment or need only part-time work while attending classes. The "Creative Job Search" seminars on campus are a fairly recent innovation but already student enthusiasm and motivation has been built up which would indicate that a good percentage of applicants should find work. The CMC at Simon Fraser University is now evaluating the success of their program through a survey conducted at the end of the spring semester in April 1971.

# Student placement and career planning

The Department of Manpower and Immigration is vitally interested in youth, and it is continually striving to improve and expand the scope of its services to young people. Included in these services is the Department's publication program. It supplies information to counsellors to assist in providing employment and career counselling to youth and to employers to assist in the efficient employment of youth.

The publications have been an integral part of the Department's work in this field for many years. The Career Outlook publications appear annually and are designed for general distribution. They are published as two volumes, one for universities and one for community colleges. A Directory of Employers is also produced annually and lists those employers who have stated their intention of offering employment to university graduates. There are also more specialized publications which are designed for the use of manpower counsellors, placement officers, faculty members, and employers. These may also be of use to the university or community college student or graduate. This group includes the Supply and Demand for New University Graduates and the Requirements and Average Starting Salaries for universities and community colleges.

The Department also publishes a number of pamphlets. These are available from the local Canada Manpower Centres. In addition the Department produces a considerable amount of material which can be used by career guidance personnel in schools across Canada. Briefs about various occupations are being prepared and are designed to help students make a career choice. These briefs are available at local Canada Manpower Centres or from school guidance counsellors.

As our economy grows and society increases in complexity, there will no doubt be a continuing need for highly qualified personnel with either university or community college training. To assist in satisfying this need, the Department operates Canada Manpower Centres at many universities and colleges. These Canada Manpower Centres are designed to fully utilize administrative, professional, and technical personnel by providing

assistance to students in their career planning and by helping them to find suitable permanent, summer, or part-time employment. So that interference with studies is kept to a minimum, the student placement CMC accommodates employers, both locally and from other parts of the country, in interviewing students on campus. Students may also be put directly in touch with those employers who are not recruiting on campus.

In universities and community colleges where there are no CMC's, the student is advised to contact the university or college placement office or one of the off-campus CMC's spread across Canada. These provide counselling service, advice about career opportunities, and assistance in finding employment.

All CMC's, as well as student placement offices, usually have a list of available job vacancies. These positions may be local, or they may be located in other cities. Once the counsellor has gained a knowledge of the young person's qualifications and aspirations, usually through one or more interviews, he is able to compare these with the demands of the employer. Then he may suggest that the student apply for certain positions, or he may be able to arrange interviews. The counsellor may also recommend that the student or graduate allow his application to be circulated throughout the region, province, or country, to expose him to job vacancies in other areas.

Since today's employment market is highly competitive, it is recommended that the student register at the nearest campus office or local Canada Manpower Centre early in the academic year in order that he may be exposed to as many job vacancies as possible.

A list of the campus offices where students or graduates may seek help is given on the following pages.

## On campus services

Canada Manpower Centres,  
Student Placement and Career Planning Offices

\*Universities and Community Colleges where there is no Canada Manpower Centre but there is a College or University Student Placement office.

### NEWFOUNDLAND

## NOTES

**ACADIA UNIVERSITY,**

Dr. J.M.R. Beveridge, President,  
Wolfville, Nova Scotia.

**Activity**

Acadia University offers bachelor's and master's degree in arts and science. It also offers courses leading to a bachelor's degree in education, business administration, science (home economics, physical education), music, theology, and divinity. It grants diplomas in Education and Secretarial Science, a certificate in Applied Science and licentiate in Music. The University also operates a library serving its students and the citizens of Wolfville.

**Requirements**

Biology, Chemistry, Mathematics, Physics (D)  
English and French languages and literatures,  
History (D)

Political Science, Psychology, Sociology (D)

**General Information**

Recruits when necessary. Personnel must be English-speaking. Acadia University is a co-educational institution with a total enrolment of 2,054 students and a teaching staff of 144. Its library has a staff of 43 including some student assistants and an annual circulation of 60,000 books.

**ACRES CONSULTING SERVICES LIMITED FOR H.G. ACRES LIMITED;**

Niagara Falls and Toronto, Ontario.

Mr. B.H. Goodings,  
Director Personnel Services,  
20 Victoria Street,  
Toronto, Ontario.

Acres Atlantic Limited; Halifax, N.S.

Acres Intertel Limited; Ottawa, Ontario

Acres Quebec Limited; Montreal, Quebec

Acres Western Limited; Vancouver, B.C., Calgary, Alberta

Acres International Limited; Niagara Falls, Ontario.

**Activity**

Acres Consulting Services Limited embodies a group of companies offering world wide consulting services in the areas of Energy Systems, Resource Development, Town and Regional Planning and in the design, supervision and management of large scale construction projects.

**Requirements**

Engineering: Chemical and Mining (B,M)

Civil, Electrical, Mechanical and Geological (B,M,D) (S)

Computer Sciences (B)

Urban and Regional Planning (B,M,D)(S)

Economics (B,M,D)(S)

Commerce and Business Administration (B,M)

Geography (B,M), Biochemistry and Biology (B,M,D)

Library Science (B)

**General Information**

Recruits year-round. Recruiting literature is available. Personnel must be English-speaking. Other languages are a definite asset for overseas assignments. There is a summer employment program. Acres is a Canadian-owned and based company with international operations. Subsidiaries recruit personnel individually and through the head office.

**ADAMSON AND ASSOCIATES, GORDON|S.**

Architects, Engineers and Site Planners,  
Mr. Howard J. Aitken, Controller  
123 Eglinton Ave. East,  
Toronto 12, Ontario.

**Activity**

Gordon S. Adamson and Associates specialize in University buildings, office buildings, schools, industrial buildings, and warehouses; structural design of such structures in conjunction with architectural design.

**Requirements**

Engineering: Civil (B)(S)

Architecture (B)(S)

**General Information**

Recruits as necessary. Applicants must be able to write and speak English fluently. Specialization in structural engineering for buildings preferred.

**AGE AND OPPORTUNITY CENTRE INC.,**

Mrs. E. Shapiro, Executive Director,  
204, 322 Donald Street,  
Winnipeg 2, Manitoba.

**Activity**

The Age and Opportunity Bureau provides counselling and rehabilitation services to the older, usually retired, citizens of the community and their adult children. It also stimulates community interest in the problems of older citizens. It has established a day centre as well as many committees on housing, leisure time, and related subjects.

**Requirements**

Liberal Arts (any discipline) (B)

Social Work (B,M)

Education (B)

**General Information**

Recruits when necessary. Personnel must be English-speaking. There is a summer employment program. The Age and Opportunity Bureau has three professional workers on staff as supervisors of case work, group work, and adult education programs. Three supervisors are responsible for the operation of 3 full-time day centres. The professional staff works closely with volunteer groups.

**AIR CANADA**

Mr. Jean Charland  
Supervisor Professional Recruiting,  
37th Floor, Place Ville Marie,  
Montreal 113, Quebec.

**Activity**

Air Canada provides passenger and cargo air services to major centres in Canada, the United States, Europe, and the West Indies (including Bermuda and the Bahamas).

**Requirements**

Psychology (M)

Mathematics (B,M), and Computer Sciences (B)

Engineering: Aeronautical, Industrial and Mechanical (B)

Commerce and Business Administration (B,M)

**General Information**

Recruits as necessary. Bilingualism is an asset, and a requirement for many public contact positions. There is a summer employment pro-

gram. Employment is available in Montreal and Toronto.

**ALBERTA, GOVERNMENT OF**

The Director of Recruitment and Selection,  
Mr. J.C. Cels, Director of Departmental Services  
Room 500, Terrace Building,  
Edmonton, Alberta.

Employment is offered at manufacturing plants in Calgary, Edmonton, Alta., and Montreal, Que., and at sales offices in Vancouver, B.C., Edmonton, Calgary, Alta., Toronto, Ottawa, Thunder Bay, Ont., Winnipeg, Man., Montreal, Quebec, Quebec, and Dartmouth N.S. A research and development centre is located in Calgary. English and French-speaking personnel are required.

**ATLANTIC RICHFIELD CANADA LTD.,**

Mr. A.J. Rendall,  
Personnel Manager,  
727 - 7th Avenue S.W.,  
Calgary 2, Alberta.

**Activity**

Atlantic Richfield Canada Ltd. is engaged in exploration and production of gas and oil; operates gas processing plant.

**Requirements**

Geology (B,M), Geophysics and Mathematics (B)  
Engineering: Chemical, Mechanical, Civil, Physics (B) and Geological (B,M)

**General Information**

The normal recruiting period is restricted from October 1 to December 15. Recruiting literature is available. Personnel must be English-speaking. Employment is offered at Calgary and Edmonton, Alberta. There is a summer employment program.

**ATLANTIC SUGAR REFINERIES COMPANY LIMITED,**

Mr. J.L. McVane, Personnel and Office Manager,  
P.O. Box 3800,  
Saint John, New Brunswick.

**Activity**

Atlantic Sugar Refineries Company Limited refines sugar cane and markets 550,000,000 lbs. of sugar per year.

**Requirements**

Engineering: Chemical, Electrical and Mechanical (B)  
Chemistry (B)

**General Information**

Recruits when necessary. Personnel must be English-speaking. Employment is offered primarily in Saint John, N.B. Atlantic Sugar Refineries recently underwent a diversification program and now participates in fishing operations in Newfoundland and fishing and pulpwood operations in New Brunswick. There is a summer employment program.

**ATLAS CHEMICAL INDUSTRIES CANADA LTD.,**

Mr. H.B. Paul, General Manager,  
P.O. Box 1085,  
Brantford, Ontario.

**Activity**

Atlas manufactures food and industrial grade polyols and surfactants in Brantford; and markets these, and activates carbon, and corrosion resistant polyester resins in Brantford, Montreal and Vancouver.

**Requirements**

Engineering: Chemical (B)  
Chemistry and Biochemistry (B)

**General Information**

Recruits as necessary. Recruiting literature is available. Personnel must be English-speaking; French is necessary in Quebec. Employment is offered at Brantford, Toronto, Ontario, and at Montreal, Quebec.

**ATOMIC ENERGY OF CANADA LIMITED,**

Mr. S.E. Lipsin, Co-ordinator, Personnel Services,  
275 Slater Street,  
Ottawa 4, Ontario.

**Activity**

Atomic Energy of Canada Limited (AECL), a Federal Crown Company, carries out basic and applied research and engineering development in the broad field of nuclear energy; designs and builds prototype nuclear-electric power utilities, and produces and markets radioactive isotopes and associated equipment.

**Requirements**

Biology, Chemistry, Computer Sciences, Mathematics and Physics (B,M,D)  
Commerce and Business Administration and Library Science (B,M)  
Engineering: Chemical, Electrical, Mechanical, Metallurgical and Physics (B,M,D)

**General Information**

Recruits as necessary. Recruiting literature is available. There is a summer employment program for students in their third year and above. Employment is offered at all four Atomic Energy of Canada Limited which are Chalk River Nuclear Laboratories at Chalk River, Ontario; Commercial Products, Ottawa, Ontario; Power Projects, Sheridan Park, Ontario and Whiteshell Nuclear Research Establishment at Pinawa, Manitoba. Atomic Energy of Canada Limited has a total staff of about four thousand six hundred, of whom approximately nine hundred and fifty are professional scientists, engineers, and administrators.

**THE AUSTIN COMPANY LIMITED**

Mr. M.W. Leobold, Chief Engineer,  
555 Burnhamthorpe Road,  
Etobicoke, Ontario.

**Activity**

The Austin Company Limited is engaged in engineering and architecture in all branches, starting with reports and studies, through complete drawings, specifications, estimating and purchasing. Austin Construction Division builds most of the projects engineered by the company, although some purely consulting engineering is carried out. The staff includes members of all branches of engineering as well as architects. Engineering engagements also include field inspection, sales assistance and direct client contact on all projects.

**Requirements**

Architecture (B,M)  
Engineering: Civil, Electrical, Industrial, Mechanical and Mining (B,M)

**General Information**

Recruits as necessary. Recruiting literature is available. Personnel must be English-speaking. The Company would also consider undergraduates.

**AUTOMATIC ELECTRIC (CANADA) LIMITED,**

Mr. D.M. MacIntyre, Employment Supervisor,  
100 Strowger Blvd.,  
Brockville, Ontario.

**Activity**

The Company produces automatic telephone systems, automatic toll ticketing, community automatic exchanges, telephones and accessories, electrical control apparatus and systems, electrical automatic exchanges and electronic automatic exchanges.

**Requirements**

Engineering: Electrical, Industrial and Mechanical (B)  
Commerce and Business Administration (M)  
Computer Sciences (B)

**General Information**

Recruits as necessary. Personnel must be English-speaking. Automatic Electric (Canada) Limited has its main plant in Brockville and a branch plant in Lethbridge, Alta. Recruiting literature is available.

**AVON PRODUCTS OF CANADA LIMITED,**

Mr. M.A. Lavigne, Vice-President, Personnel and Community Relations,  
P.O. Box 8000,  
Pointe Claire-Dorval 700, Quebec.

**Activity**

Avon Products of Canada Limited manufactures and sells cosmetics and toiletries.

**Requirements**

#### **LA BRASSERIE LABATT LIMITEE,**

Mr. J. Ranger, Personnel Manager,  
50 Labatt Ave.,  
LaSalle, Quebec.

#### **Activity**

Brewers of beer, ale and lager.

#### **Requirements**

Liberal Arts (any discipline) (B)  
Physical and Natural Sciences (any discipline) (B)  
Engineering: (any discipline) (M)  
Commerce and Business Administration (B,M)

#### **General Information**

The normal recruiting period is September to February. Recruiting literature is available. La Brasserie Labatt Ltée is a subsidiary of John Labatt Limited, London, Ont. (see separate listing)

#### **BRISTOL AEROSPACE (1968) LIMITED**

Mr. F.L. Hinings  
Personnel Manager  
P.O. Box 874  
Winnipeg 1, Manitoba.

#### **Activity**

The company operates a modern manufacturing facility and is a pioneer and innovator in the precision fabrication of modern high strength alloys and high temperature and corrosion resistant alloys. A principal area of manufacturing is the fabrication of major welded jet engine components for leading gas turbine engine manufacturers. Included in special alloy fabricating work at Bristol is the design and manufacture of nuclear research equipment. The Company is also engaged in the design and manufacture of filament wound and reinforced plastic components including pressure vessels,

rocket nose cones and other structures employed in undersea, land and airborne applications. Paralleling its activities in manufacturing, Bristol is a major contractor to military and civil customers in the inspection, rework, and modification of aircraft. Aircraft types range from supersonic fighters through a variety of civil utility aircraft to helicopters. In the field of aircraft service, Bristol manufactures various auxiliary equipment. Included are Bristol designed retractable wheel skis for winter and far northern conditions, seaplane floats for amphibious landing capability and equipment to improve aircraft performance. Technical support to the aircraft departments is concerned with the numerous aspects of aircraft system installations including electrical, radio, instruments and hydraulics, together with structural analysis and aircraft assembly. A major engineering activity at Bristol is the design and development of Black Brant rockets and space vehicles for use in upper atmosphere research. This activity involves the development of advanced technology in many directions. In the main departmental divisions of vehicle design, propulsion, instrumentation, and launch services, engineering and technical personnel are involved in rocket structure design, propulsion and flight research, propellant processing and casting, design and development of rocket-borne telemetry and electronic instrumentation and launch services at rocket ranges. In addition to functions already mentioned, personnel are employed in engineering development for the manufacturing and aircraft departments.

#### **Requirements**

Engineering: Mechanical, Aeronautical and Electronic (B,M)

#### **General Information**

Recruits as necessary. Personnel must be English-speaking.

#### **BRITISH COLUMBIA CIVIL SERVICE COMMISSION**

Mr. W.J. Williams, Chief Selection Officer, Victoria, British Columbia.

#### **Activity**

The British Columbia Civil Service Commission recruits for all the ministries in the provincial government.

#### **Requirements**

Geography (B), Economics (B,M), Sociology (B) Psychology (B,M,D)  
Nursing (B,M), Physiotherapy (B), Occupational Therapy (B), Psychiatry (D), and Medicine (D)  
Bacteriology and Microbiology, Mathematics and Computer Sciences (B) Biology (B,M)  
Library Sciences, Education and Home Economics (B) Urban and Regional Planning (M) Forestry (B,M) (S) Social Work (B,M)  
Engineering: Civil (B,M)(S) and Geological (M)(S), Chemical (B), and Mining (B)  
Agriculture (B,M), Commerce and Business administration (B)

#### **General Information**

Recruits year-round. Recruiting literature is available. Employment is offered throughout the province but mainly in Victoria and Vancouver and on the lower mainland. Summer employment program English-speaking personnel are required. Provincial government serv-

ices are mainly operational and administrative. The departments listed below give an indication of the major areas of employment. #### **BRITISH COLUMBIA INSTITUTE OF TECHNOLOGY**

Mr. D.H. Goard, Principal,  
3700 Willingdon Avenue,  
Burnaby 2, British Columbia.

#### **Activity**

This Institute offers two-year technology courses at the post-secondary level in three divisions, Business Management, Engineering and Health. Programmes offered in Business Management are: Administrative Management, Broadcast Communications, Computer Programming and Systems, Financial Management, Hotel, Motel and Restaurant Management, Marketing, Technical Management. Programmes offered in Engineering are: Building, Chemical and Metallurgical, Civil and Structural, Electrical and Electronics, Biological Sciences, Forestry, Forest Products, Instrumentation Systems, Mechanical, Mining, Natural Gas and Petroleum and Surveying. Programmes offered in Health are: Biomedical Electronics, Medical Laboratory, Medical Radiography, Nursing, Public Health, Nuclear Medicine, Respiratory and Health Data Processing. Options are offered in many of the programmes.

#### **Requirements**

Economics (M)  
Commerce and Business Administration (B,M)  
Computer Sciences (B,M)  
Forestry (B,M) and Nursing (B,M)  
Engineering: Industrial (B,M)

#### **General Information**

Recruits year-round. Personnel must be English-speaking and have preferably two to five years Canadian business or industrial experience.

#### **BROCK UNIVERSITY,**

Dr. Colin A. Plint, Dean of Arts and Sciences (Academic),  
Mr. Iain Armour, Personnel Assistant (Non-Academic).  
DeCew Campus  
St. Catharines, Ontario.

#### **Activity**

Brock offers the following degrees: Bachelor of Arts (Pass and Honours) Bachelor of Science (Pass and Honours) and Master of Science (Chemistry). There is also an Institute of Land Use which operates on an interdepartmental basis and is concerned with educational and research programs in the fields of resource development, land use and conservation.

#### **Requirements**

Liberal Arts (any discipline) (B,D)  
Social Sciences (any discipline) (B,D)  
Biochemistry, Biology, Chemistry, Computer Sciences, Geology, Mathematics and Physics (D)

Engineering: Civil and Mechanical (B)

Library Science (B)

Commerce and Business Administration (B)

#### **General Information**

Recruits year-round. Personnel must be English-speaking. This is a co-educational university, 75 miles from Toronto with an enrolment of approximately 700 students. Brock has research facilities in its Department of Chemistry, Biological Sciences, Physics, Geography and Geology.

#### **BROCKVILLE GENERAL HOSPITAL,**

Mr. James G. Wilson, Administrator,  
Ormond & Emma Streets,  
Brockville, Ontario.

#### **Activity**

This is an accredited general hospital with an approved school of nursing and nursing assistant centre.

#### **Requirements**

Medicine (D) Nursing (B,M) Pharmacy (B)  
Physiotherapy (B)  
Commerce and Business Administration (B,M)  
Dietetics (B) and Social Work (B,M)

#### **General Information**

Recruits year-round.  
Recruiting literature is available.  
Personnel must be English-speaking.  
Brockville General is a public hospital with 225 beds and 36 bassinets. It has both active and chronic wards, and an active community medical centre program.

#### **BUILDING PRODUCTS OF CANADA LIMITED,**

Mr. S. Shawyer, Personnel Supervisor,  
P.O. Box 6063,  
Montreal 101, Quebec.

#### **Activity**

This firm manufactures roofing, siding and sheathing products, acoustical tile, wallboard, floor tile, plastic pipe, conduit pipe and moulded plastics.

#### **Requirements**

Chemistry (B)  
Engineering: Mechanical (B)  
Commerce and Business Administration (B)

#### **General Information**

Recruits as necessary. Personnel must be English-speaking; French is helpful in Quebec. Employment is offered in Quebec, Ontario and the Prairies. Building Products has a summer employment program.

#### **BURNABY,**

#### **CORPORATION OF THE DISTRICT OF**

Mr. D.F. Hicks, Personnel Director,  
4949 Canada Way,  
Burnaby 2, British Columbia.

#### **Activity**

Burnaby has 1,100 employees who provide 15 types of municipal services under a municipal manager.

#### **Requirements**

Geography (B,M)  
Psychology and Sociology (B)  
Social Work (B)  
Urban and Regional Planning (B,M)  
Architecture (B,M)

Speech Therapy (B)

#### **General Information**

Recruits as necessary. Personnel must be English-speaking. Burnaby, adjacent to Vancouver, has a population of 120,000.

#### **BURNDY CANADA LTD.,**

Mr. D.E. Brophy  
Personnel Manager,  
1530 Birchmount Road,  
Scarborough, Ontario.

#### **Activity**

Burndy Canada Ltd. manufactures electrical connectors and conductor supporting systems and maintains sales outlets throughout Canada.

#### **Requirements**

Commerce and Business administration(B)  
Engineering: Electrical, Industrial and Mechanical (B)

#### **General Information**

Recruits year-round. Recruiting literature is available. Applicants must be English-speaking but a knowledge of French is a definite asset. There is a summer employment program.

#### **BURROUGHS BUSINESS MACHINES LIMITED,**

Mr. S.E.D. Smith, Personnel Supervisor,  
801 York Road,  
Don Mills, Ontario.

#### **Activity**

Throughout Canada Burroughs markets general office, accounting, data processing, and financial equipment, systems, forms and supplies. **CANADA - GOVERNMENT OF**

Director, (indicate specific program)  
Public Service Commission,  
Tower 'A', Place de Ville,  
Ottawa, Ontario.

**Activity**

The Public Service Commission of Canada is the staffing body of the Federal Public Service, the largest employer with the greatest variety of occupations in Canada. Within the Public Service Commission are staffing programs responsible for recruiting university graduates from bachelor to doctorate level. The Public Service Commission recruits for more than fifty government departments and agencies. Commission headquarters are in Ottawa with Regional Offices located across Canada.

**THE ADMINISTRATIVE MANPOWER RECRUITMENT AND DEVELOPMENT PROGRAM**

Recruits graduates in Commerce, Arts, Computer Sciences and Business Administration, and is responsible for providing a continuous flow of skilled administrators to the Public Service. Administrative trainees are placed in a variety of learning situations in various areas of the Public Service. Provided with these opportunities, the trainee develops a sense of responsibility and the capacity to integrate rapidly within departments and agencies of the Public Service of Canada.

**THE APPLIED SCIENCES PROGRAM**

Recruits engineers in all disciplines. Most requirements are for graduates at the bachelor level.

**THE BIO-PHYSICAL SCIENCES PROGRAM**

Recruits bachelor graduates in chemistry, pharmaceutical chemistry, agriculture, forestry and physics-mathematics. A limited number of masters graduates are required for research in a variety of specializations in the biological, physical and related sciences.

**THE SOCIAL-ECONOMIC PROGRAM**

Recruits all types of economists and has a need for those with specialties in transportation, resource economics and regional development. Statisticians and Mathematicians are also required. There is a growing requirement for post-graduates possessing specialization in these disciplines. This program also recruits lawyers, librarians, historical researchers and translators.

**General Information**

The normal university recruiting period for first degree graduates is October to January; for post-graduate degree holders, year-round. Literature regarding employment opportunities with the Public Service of Canada is available to Canadian students at their campus placement offices.

English and French-speaking personnel are required. Employment is offered across Canada and, for those in the Foreign Service Officer category, in 70 countries around the world. However, in the Sciences and Social Sciences opportunities are largely restricted to the Ottawa-Hull area. There is a summer employment program. Although a limited number of positions are filled by departments recruiting independently, all applications sent to the above address will receive full consideration. The various departments of government are listed below:

Agriculture Communications  
Consumer and Corporate Affairs  
Energy, Mines and Resources  
External Affairs  
Finance  
Fisheries and Forestry  
Indian Affairs and Northern Development

#### **DOMINION GLASS COMPANY LIMITED,**

Mr. Andrew Falconer, Employment Manager,  
P.O. Box 190,  
Montreal 101, Quebec.

#### **Activity**

Dominion Glass Company Limited is the largest Canadian supplier of glass containers and tableware. The 1970 sales volume was \$76,861,499. Glass container manufacturing plants are located in Montreal, Quebec, Bramalea, Hamilton and Wallaceburg, Ontario, Redcliff, Alberta, and Burnaby, British Columbia. A modern plant in Etobicoke, Ontario, has been producing polyethylene and polyvinyl chloride (PVC) plastic containers since 1965. A subsidiary, National Pressed Glass Limited, located in Brantford, Ontario, produces specialized glass products other than containers. Since its formation, in 1913, Dominion Glass has worked continuously to improve operating techniques and facilities. In 1936, the Company was the first in Canada to use the silk screen (A.C.L. - Applied Colour Lettering) process for decorating glass containers on a commercial scale. In 1940 Dominion Glass obtained the exclusive Canadian rights to the use of the

Hartford-Empire 'IS' (Individual Section) machine. This was the most important breakthrough in forming, since the first automatic bottle-making machine, the 'Owens', was introduced in 1903. In 1967, Power Corporation of Canada Limited, acting primarily as an investment holding company, became a major stockholder of Dominion Glass. A multi-million dollar modernization and expansion programme began in 1967 has brought all plant facilities up to the latest standards in the North American glass container industry. The programme encompassed every plant, culminating in the new plant at Bramalea, Ontario, in September, 1970. These improvements in production facilities, along with a streamlining and strengthening of the whole management team, and a modern service organization, keep Dominion Glass in the vanguard of the industry. They provide the capability for supplying, in quantity, the quality demanded by customers in the food, beverage, toiletries, pharmaceutical and cosmetics industries.

#### **Requirements**

Physics (B,M)(S)

#### **General Information**

Recruits as necessary. Personnel must be English-speaking; French is an asset in Quebec. The Dominion Glass Company Limited offers employment in Montreal.

**M.S. YOLLES ASSOCIATES LIMITED**

Contrôle  
Monsieur M.O. Man  
85, rue Richmond ouest  
Pièce 812  
Toronto 1 (Ontario)

**Activités**

La société M.S. Yolles Associates Limited, in-  
généralistes-conseils, s'occupe d'études de cons-  
tructions de tous genres: commerciales, insitu-  
personnel enseignant de 105 membres qui dis-  
pense son enseignement à 2,300 élèves. Des  
résidences sont disponibles pour le personnel  
enseignant.

**YORKTON SEPARATE SCHOOL  
DISTRICT NO. 32**

Monsieur M.C. Knoll  
Surintendant  
C.P. 627,  
Yorkton (Saskatchewan)

**Activités**

Le district des écoles séparées de Yorkton ac-  
cueille les élèves et leur dispense l'enseignement  
à la première à la huitième année; ce qui  
comprend aussi quelques classes spéciales. Il y a  
trois écoles élémentaires dans le district.

**Candidats Recherchés**

Pédagogie (B)

**Renseignements généraux**

La période de recrutement s'étend normale-  
ment du 30 avril au 15 juillet. On peut se  
procurer la documentation pertinente. Le dis-  
trict des écoles séparées de Yorkton dessert la  
ville, où toutes les écoles sont situées. Un per-  
sonnel de 28 instituteurs enseigne actuellement  
à quelque 600 étudiants, qui résident tous dans  
la ville. Le personnel doit parler l'anglais.

**YOUNG MEN'S CHRISTIAN  
ASSOCIATION**

Monsieur M.B. Shantz  
Directeur du personnel  
2160, rue Yonge  
Toronto (Ontario)

**Activités**

Le YMCA est un organisme mondial, privé  
autonome, dont les programmes sont centrés  
sur les intérêts et les besoins des jeunes.

**Candidats Recherchés**

Arts Libéraux (toutes disciplines) (B,M)(E)  
Éducation physique (B,M)(E)  
Sciences Sociales (toutes disciplines) (B,M)(E)  
Service Social (B,M)(E)  
Pédagogie (B,M)(E)  
Psychologie et sociologie (B,M)(E)  
Commerce et administration des affaires  
(B,M)(E)

**Renseignements généraux**

Le recrutement se fait à l'année longue.  
Besoin de personnel de langue anglaise et de  
langue française.

Des emplois sont offerts partout au Canada.

Il y a un programme d'emplois d'été. On  
peut obtenir de la documentation sur le  
recrutement.

**YORKTON SCHOOL UNIT NO. 36**

Monsieur T.B. Jolson  
Surintendant des écoles  
91, rue Broadway est  
Yorkton (Saskatchewan)

**Activités**

La division secondaire no 36 de Yorkton com-  
prend 24 écoles, dont deux offrent des classes  
de la première à la douzième année et dix, des  
classes de la première à la dixième année. Les  
autres enseignent de la première à la septième  
année. On trouve en outre dans ces écoles des  
classes spéciales et des cours de métier. Deux de  
ces écoles sont situées dans la ville et les autres  
dans la région environnante.

**Renseignements généraux**

Éducation physique (B)  
Pédagogie (B) et Psychologie (B)

**Candidats Recherchés**

Le District No 159 des écoles publiques de  
Yorkton accueille les élèves et leur dispense  
l'enseignement de la première jusqu'à la neuviè-  
me année, y compris des classes spéciales. Ce  
district comprend sept écoles élémentaires et  
une école moyenne.

**Activités**

Monsieur M.C. Knoll  
Surintendant des écoles  
School Administration Building  
Rue Darlington et avenue Myrtle  
Yorkton (Saskatchewan)

**YORKTON PUBLIC SCHOOL DISTRICT  
NO. 159**

Le recrutement du personnel se fait à l'année  
longue. Le personnel doit parler l'anglais. La  
société M.S. Yolles Associates Limited offre de  
l'emploi seulement en Ontario. On peut se pro-  
curer de la documentation sur le recrutement.

blèmes de construction. Elle prépare des rapports à la  
de construction. Cette société s'occupe  
également de surveiller l'exécution de travaux

**YUKON, GOUVERNEMENT DU  
TERRITOIRE DU**

Monsieur Jean N. Bisier  
Directeur du personnel - Recrutement  
Case postale 2703  
Whitehorse (Yukon)

**Activités**

Le gouvernement du Territoire du Yukon est  
chargé de toutes les fonctions normalement du  
ressort provincial à l'exception de l'administra-  
tion des ressources naturelles. À part ses fonc-  
tions administratives normales, le gouverne-  
ment du Territoire du Yukon dirige une organi-  
sation scolaire composée d'une école secondai-  
re, quatre écoles élémentaires et secon-  
daires combinées, et dix-sept écoles élémentai-  
res, plus un centre de formation professionnelle  
et technique. L'organisation emploie 250 ensei-  
gnants et instituteurs. Les candidats aux postes  
d'enseignement doivent avoir fait au moins  
trois ans d'université dont un an de formation  
pédagogique professionnelle. Un organisme de  
bibliothèque régional comptant 52,000 volumes  
et une circulation annuelle de 23,527 dessert  
une population de 25,000 âmes au Yukon. Voi-  
ci la liste des ministères provinciaux:

Gouvernement local.

Tirer.

Santé,

Bien-être et Réadaptation,

Éducation,

Sectariat du Territoire et Régistrier général  
Tourisme,  
Services de conservation et d'information,  
Régie des alcools,  
Service du conteneur.

**Candidats Recherchés**

**HOPITAL PSYCHIATRIQUE DE**

**LONDON**

Monseigneur Edward C. Likeness, Agent du

personnel

Case postale 2532, station terminale 'A',

London 25 (Ontario)

**Activités**

L'Hôpital psychiatrique de London est un établissement multidisciplinaire qui comporte 500 lits; affilié à l'Université Western Ontario, il offre une large gamme de services sociaux comprenant des soins internes et externes, des gardes de jour et des services de consultation aux organismes régionaux. Le service interne 'en équipe' comprend le diagnostic, le traitement intensif et des soins à long-terme pour un groupe de malades mentaux divers, agés de plus de 16 ans. On emploie dans cette hôpital les méthodes classiques de psychiatrie, à l'aide de systèmes électroniques complexes, d'ordinateurs et d'un laboratoire de psychologie muni d'un système de télévision en circuit fermé. Le service externe qui représente la majeure partie du travail de l'hôpital, consiste à établir les diagnostics, à traiter le malade où à l'envoyer chez un spécialiste compétent, enfin à offrir un traitement de contrôle. Une étroite collaboration entre le personnel de l'hôpital et les organismes de consultation est essentielle au traitement médical tel qu'on le conçoit dans cet hôpital. En plus des programmes de soins psychiatriques généraux qu'offrent les quatre sections triques générales, il existe des programmes spécifiques pour les enfants, les adolescents, les intoxicés et les problèmes judiciaires en voie de développement. Eiant un hôpital d'enseignement de l'Université Western, le personnel est encouragé à faire de son mieux pour donner l'exemple durant la formation des étudiants en médecine, psychiatrie, psychologie, soins infirmiers, bien-être social et moral et ergothérapie.

**DOMINION GLASS COMPANY LIMITED**

Monsieur Andrew Falconer  
Gérant de l'emploi

Case postale 190  
Montréal 101 (Québec)

**Activités**

Dominion Glass Company Limited est le fabricant de bouteilles et d'articles de table en verre le plus important au Canada. Le montant des ventes, en 1970, s'est élevé à \$76,861,499. Les usines de fabrication de récipients en verre sont situées à Montréal (Québec), à Bramalea, Hamilton et Wallaceton (Ontario), à Redcliff (Alberta) et à Burnaby (Colombie-Britannique). Une usine moderne à Etobicoke (Ontario) fabrique, depuis 1965, des bouteilles en plastique: polyéthylène et chlorure de polyvinyle.

National Pressed Glass Limited, une filiale située à Brantford (Ontario), fabrique des articles spéciaux en verre autres que des récipients. Depuis sa création en 1913, Dominion Glass s'est constamment efforcée de perfectionner les techniques et les services. En 1936, cette compagnie fut la première au Canada à utiliser le procédé de la sérigraphie (L.C.A. - Impression de couleur appliquée) pour décorer les bouteilles en verre à une échelle commerciale. En 1940, Dominion Glass obtenait le droit exclusif d'utiliser au Canada la machine Hartford-Em-pire 'ST' (Section individuelle) en matière de révolution importante en matière de forme, depuis l'apparition, en 1903, de la première machine automatique ('Owens') pour fabriquer des bouteilles. En 1967, Power Corporation of Canada Limited, agissant principalement à titre de société de portefeuille devenait un actionnaire important de Dominion Glass.

Administration du personnel  
C.P. 610, Station 'B'  
Montréal 110 (Québec)

à Ottawa, mais elle a implanté des bureaux régionaux un peu partout au Canada.

#### Candidats Recherches

Le programme de recrutement et de perfectionnement du personnel administratif Recrute des diplômés en commerce, en arts, en sciences, informatique et en gestion des entreprises; son rôle est de doter la Fonction publique d'administrateurs compétents et d'en assurer la relève. Les stagiaires en administration sont placés dans divers postes de formation dans maints secteurs de la Fonction publique. Grâce à ces dispositions, ils parviennent à acquérir le sens des responsabilités et la capacité de s'intégrer rapidement aux ministères et organismes de la Fonction publique du Canada. Les cadres des sciences appliquées Recrutement des ingénieurs dans toutes les disciplines. Candidats recherchés surtout au niveau ou bachelier. Les cadres des sciences bio-physiques Recrutent des bacheliers en chimie, chimie pharmaceutique, agricultures, sciences forestières et en physique-mathématiques. Recrute un nombre limité de titulaires de la maîtrise. Il existe des postes de chercheurs dans divers domaines spécialisés de la biologie, de la physique et des sciences qui leur sont connexes. Les cadres socio-économiques Recrutent des économistes de toutes catégories et, notamment, ceux qui sont spécialisés dans les transports, l'économie des ressources et le développement régional. On a aussi besoin de statisticiens et de mathématiciens, et la demande de diplômés spécialisés dans ces disciplines augmente toujours. Les cadres socio-économiques recrutent également des hommes de loi, des bibliothécaires, des chercheurs en histoire et des traducteurs.

#### Renseignements généraux

La documentation concernant les possibilités d'emploi dans la Fonction publique est à la disposition des étudiants canadiens au bureau de placement de leur maison d'enseignement. La période normale de recrutement de bacheliers s'étend d'octobre à janvier, mais le recrutement de diplômés d'études supérieures se fait toute l'année. On peut obtenir des publications sur le recrutement. La Commission recherche du personnel d'expression anglaise et d'expression française. Des emplois sont offerts partout au Canada et les fonctionnaires de la catégorie des agents du service extérieur sont répartis dans 70 pays du monde. Toutefois, la plupart des postes dans le domaine des sciences et des sciences sociales se présentent dans la région Ottawa-Hull seulement. Il y a un programme d'emplois d'été. Les ministères mêmes font leur propre recrutement pour un nombre restreint de postes, mais toutes les demandes d'emploi envoyées à l'adresse susmentionnée seront étudiées à fond. Voici la liste des ministères fédéraux:

Département des Assurances  
Bureau de Gestion des Communications  
Expansion Économique Régionale  
Conseil du Trésor  
Industrie et Commerce  
Ministère des Affaires des anciens combattants  
Ministère des Affaires extérieures  
Ministère des Affaires indiennes et du Nord canadien  
Ministère de l'Agriculture  
Ministère de la Consommation et des Corporations

Ministère de la Défense nationale  
Ministère de l'Énergie, des Mines et des Ressources

#### Ressources

# Placement et orientation professionnelle des étudiants

qualifié, formé dans les universités ou les collèges. Pour aider à satisfaire ces exigences, le ministère de la Main-d'œuvre et de l'immigration a établi des Centres de Main-d'œuvre du Canada dans plusieurs universités et collèges. Ces Centres de Main-d'œuvre du Canada visent à l'utilisation maximale du personnel administratif, professionnel et technique, en aidant les étudiants à trouver un emploi stable, à planifier leur carrière et à trouver un emploi à temps partiel. Afin que cette activité dérange le moins possible le programme d'études, ces centres peuvent mener des entretiens sur place avec les employeurs de la région immédiatement des autres parties du pays. Ils peuvent aussi mettre les étudiants en contact direct avec les employeurs qui recrutent pas sur le campus même.

Dans les universités et les collèges où il n'y a pas de Centres de Main-d'œuvre du Canada, l'étudiant doit s'adresser au bureau de placement de l'université ou du collège, ou s'adresser directement à l'un des nombreux Centres de Main-d'œuvre du Canada, lesquels fournissent des services de consultation, des conseils sur les possibilités de travail et de l'aide pour trouver un emploi. Tous les Centres de Main-d'œuvre du Canada ont généralement une liste d'emplois ouverts aux étudiants ou aux diplômés, dans la région immédiate ou dans d'autres villes.

Lorsque le conseiller connaît les qualifications, les aptitudes, et les aspirations du jeune candidat, et ce d'ordinaire après une ou plusieurs entretiens, il peut le comparer aux exigences de l'employeur. Il peut recommander alors à l'étudiant de postuler l'emploi, ou peut organiser des entrevues au nom de l'étudiant. Le conseiller peut aussi recommander à l'étudiant ou au diplômé qu'il autorise la circulation de sa demande d'emploi à travers la région, la province ou le pays. Le candidat profite alors du fait que le conseiller connaît la demande des emplois ouverts dans d'autres régions.

### NOUVELLE-ECOSSE

Université Acadia, Wolfville

Le ministère de la Main-d'œuvre et de l'immigration s'intéresse vivement à la jeunesse et s'efforce d'améliorer et d'étendre la portée des services qui lui sont spécialement destinés. Parmi ces services, il y a une série de publications qui renseignent les conseillers afin de les aider à dispenser des conseils professionnels aux jeunes, tout en renseignant les employeurs susceptibles de les embaucher à donner des emplois appropriés à ceux-ci.

Les publications font partie intégrante du travail du ministère dans ce domaine depuis de nombreuses années. Les brochures "Perspectives de carrières" sont publiées tous les ans et diffusées à travers le Canada. Il y a deux volumes, l'un pour les universités et l'autre pour les collèges. Un annuaire des employeurs est aussi publié chaque année et donne les noms des employeurs qui sont prêts à offrir de l'emploi aux nouveaux diplômés d'université. Il existe aussi des publications plus spécialisées conçues à l'usage exclusif des conseillers en main-d'œuvre, des agents de placement, des dirigeants d'universités et des employeurs qui peuvent être elles aussi utiles aux diplômés et aux étudiants des universités et des collèges. Il y a par exemple, les brochures "Nouveaux diplômés d'universités — offre et demande", "Répertoire des diplômés d'universités et de collèges et des traitements initiaux moyens", ainsi que "Demande et salaires initiaux moyens".

Le ministère publie également certains dépliant distribués par les Centres de Main-d'œuvre du Canada. En plus de ces publications, le ministère produit une grande quantité de documents qui peuvent servir au personnel chargé de l'orientation professionnelle dans tous les établissements d'enseignement au Canada. Des résumés sur chaque profession sont en voie de préparation et devraient aider les étudiants dans le choix de leur carrière. Ils sont distribués par les Centres de Main-d'œuvre du Canada et les conseillers d'orientation professionnelle dans les établissements d'enseignement.

La complexité croissante de la société et la diversification accrue de l'économie ne laissent aucun doute quant aux besoins constants de personnel hautement

sement et systématiquement leurs démarches en vue de trouver un emploi, ils peuvent en obtenir un état de quelques jours ou semaines. Une personne ne compte que sur les autres pour trouver du travail et généralement en chômage plus que nécessaire.

Les étudiants participent donc à une discussion au sujet de l'endroit où les employeurs s'adressent pour recruter du personnel. Leurs opinions sont très diverses et élargies : journaux, amis, agences de placement, publicités ou Centres de Main-d'œuvre du Canada, et les étudiants sont généralement surpris d'apprendre que la source principale demeure le contact personnel. Leur dit qu'ils doivent utiliser toutes ces sources pour trouver leur but, et que chercher un emploi représente ordinairement de quatre heures, et une semaine de travail à plein temps. Une semaine de travail ordinairement de quatre heures, et une semaine de recherche devrait également comporter huit heures par jour et cinq jours par semaine. Il semble difficile d'obtenir un rendez-vous avec 40 employeurs dans la même semaine, mais peu importe le temps qu'il faudra, si le nombre est élevé, car l'expérience a prouvé que la recherche donne lieu à deux ou trois offres d'emploi au moins. Une jeune fille de Victoria s'est vue dans un immeuble récent et, partant du dernier étage, elle a fait une demande à chacune des sociétés, et fin de la journée, plusieurs postes lui avaient offerts.

Remet à chaque étudiant une esquisse de curriculum vitae, on lui en fournit plusieurs exemples, ainsi qu'une liste pour inscrire des renseignements personnels; on explique aux participants le travail qu'ils doivent faire chez eux et qui peut prendre de 10 à 20 heures. On leur fait préparer quatre curriculum vitae, car ils ne peuvent en remettre un lors de chaque entrevue avec un employeur. Avant de rédiger ce curriculum, toutefois, il faut remplir un formulaire de renseignements personnels comportant les six questions suivantes :

En quoi ai-je déjà plus ou moins réussi ?  
En quelles occasions m'a-t-on félicité pour avoir fait quelque chose de manière exceptionnelle ?  
Quels postes ai-je déjà occupés ? (Description détaillée).

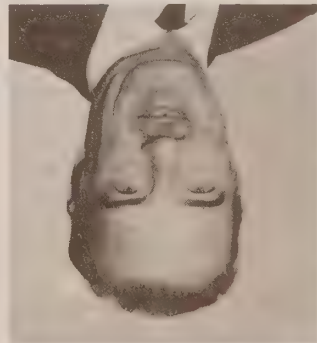

Quelles sortes de machines suis-je à même de faire fonctionner ?  
Quels travaux me plaisent-ils réellement ?  
Quels travaux me déplaisent-ils réellement ?  
On répond à chacune de ces questions avec le plus grand soin et en détail, sans oublier aucun des quatre aspects possibles, à savoir : travail rémunéré, non rémunéré, études ou plaisir. Cela exige un grand travail de réflexion, mais il se peut que tous ces faits, sortis d'un simple oubli, fassent apparaître une nouvelle personne. Tout cas, une fois achevée cette appréciation personnelle, les étudiants devraient pouvoir regrouper leurs notes et établir un curriculum vitae complet.

étudiants apprennent que bon nombre d'employeurs identifie l'engagement ou de ne pas engager le candidat les premières minutes de l'entrevue. En conséquence, il faut prêter une attention particulière à son caractère générale et soigner sa tenue. Il a également prouvé que l'employeur en puissance attache peu d'importance aux paroles, mais qu'il croit davantage en ce qui est écrit. Le curriculum vitae aidera d'autre part l'étudiant qui manque peut-être de confiance en soi et a mal à vanter ses capacités. Le conseiller en main-

d'œuvre raconte aux participants l'histoire de cet immigrant qualifié qui avait cherché du travail sans succès pendant des mois : il bégayait sans cesse. Il présentait alors un curriculum à environ six employeurs et reçut trois offres d'emploi.

Cet annuaire renferme le nom de sociétés auxquelles les étudiants pourront s'adresser, ainsi que tous les renseignements essentiels concernant leurs activités. Les CMC de toutes les universités possèdent toute une série de publications sur les carrières, où l'on trouve des descriptions d'emploi, des renseignements sur les sociétés qui recrutent des étudiants titulaires d'un premier diplôme ou d'un diplôme supérieur, ainsi que divers détails relatifs au marché du travail. En outre, les conseillers en main-d'œuvre sont là pour donner des conseils ou des directives. Les étudiants sont également informés de l'existence d'autres sources d'emploi futur, telles que les annonces pour des postes particuliers qui paraissent de temps en temps dans les pages financières des principaux journaux canadiens.

Les étudiants qui assistent à ce cours proviennent tous de facultés différentes au sein de l'université, et ils n'ont pas toujours les mêmes objectifs d'emploi. Dans l'ensemble, toutefois, ils se préparent à chercher un emploi permanent, bien que certains d'entre eux, en cours d'étude, veulent trouver un emploi d'été ou simplement un emploi à temps partiel jusqu'à la fin de leurs cours. Il y a peu de temps que les séminaires universitaires intitulés "Technique créatrice de recherche d'emploi" ont été institués mais déjà l'enthousiasme et la motivation des étudiants se sont manifestés, ce qui porte à croire que bon nombre de candidats devraient trouver du travail. A l'heure actuelle, le CMC de l'université Simon Fraser envisage de mener une enquête en avril 1971, afin d'évaluer la réussite de son programme.

Au cours des vingt dernières années, M. Bill Roberts a travaillé au Service National de l'Emploi et au ministère de la Main-d'œuvre et de l'Immigration. Il commença par travailler dans les bureaux de Vancouver et de la région du Pacifique, au sein de la Direction de l'assurance, mais fut muté à la Direction du placement et du développement de l'emploi. Il a passé une partie des dernières années au Bureau de placement des étudiants de l'Université de la Colombie-Britannique, et depuis 1965, date de la création de l'Université Simon Fraser, il travaille au CMC de l'université.

Né à Galt, en Ontario, M. Roberts a passé la majeure partie de sa vie à Vancouver et fit ses études à l'université de la Colombie-Britannique et à l'université Simon Fraser. Ancien combattant de la Seconde Guerre mondiale, il compte à son actif cinq années de service outre-mer dans le régiment Seaforth, où il a servi pendant vingt-cinq ans, avant et après la guerre. Il en est sorti avec le grade de major.

M. Roberts est marié et père de trois enfants; ses passe-temps favoris sont le golf, la pêche et le tir au fusil, et il est membre de la British Columbia Rifle Association.

## La recherche d'un emploi

Parmi ses programmes d'enseignement, l'université de la Colombie-Britannique inclut maintenant un séminaire sur la recherche d'un emploi, qui permet de fournir aux étudiants les données essentielles concernant le marché du travail. Ils apprennent à évaluer leurs aptitudes et à établir un rapport entre elles et le monde du travail. Ils apprennent à rédiger un curriculum vitae, à faire une recherche systématique pour trouver du travail et, en même temps, ils acquièrent la motivation nécessaire à cette recherche. À l'université Simon Fraser, un conseiller en main-d'œuvre du Canada enseigne la "Technique créatrice de recherche d'emploi", au moyen de séminaires ne comptant qu'un groupe restreint d'étudiants. Ces colloques sont une adaptation condensée au cours d'une seule séance, de l'ensemble des services de conseil professionnel que les Centres de Main-d'œuvre du Canada offrent à leurs clients dans toute la province.

Pour attirer l'attention des étudiants sur ce cours, on emploie des phrases telles que "Organisez vos démarches en vue de trouver un emploi convenable", "Apprenez à évaluer votre potentiel", ou encore "Vous pouvez trouver l'emploi idéal si vous savez le chercher de façon systématique". Tous les colloques ont été supervisés par dix ou quinze étudiants de toutes les facultés et titulaires d'un premier diplôme ou d'un grade plus élevé. Ce nombre de participants est idéal pour un seul conseiller, et la diversité des étudiants entraîne d'excellentes discussions et des échanges d'idées fructueuses.

Les étudiants qui participent à ce cours sont prévenus que son but n'est pas de leur fournir du travail, mais de leur apprendre à en trouver. Le conseiller en main-d'œuvre leur explique que le taux normal de pertes de personnel atteignant 3%, des centaines de postes par jour deviennent vacants, et que s'ils préparent soit-

Le but de l'entrevue est d'en arriver à faire un choix vraiment libre après avoir pris connaissance de tous les éléments objectifs et personnels de la situation. Sur le plan de la connaissance, il est possible d'établir quatre étapes dans le processus de la rencontre d'un éventuel employé et d'un employeur possible.

1) Prise de connaissance mutuelle. Il s'agit de ce premier contact au cours duquel les deux parties prennent conscience des caractéristiques propres de l'autre. C'est ici que l'employeur peut se rendre compte de ce qui distingue le candidat de tout autre candidat. Pour l'étudiant, c'est la rencontre d'un individu-échantillon représentant un employeur.

2) Chacune des deux parties essaie de s'informer plus profondément des caractéristiques de l'autre. Cette partie permet non seulement de recueillir des informations mais de les intégrer aux autres facteurs personnels. Cette information contribue à dissiper certains préjugés et à faire des choix plus précis.

3) La troisième étape est celle de l'évaluation. Il s'agit ici de savoir s'il y a convenance réciproque. Il faut alors évaluer la situation afin de savoir si elle convient à ses besoins, aspirations et aptitudes.

4) Il n'y a pas nécessairement de choix définitif ou de décision immédiate à prendre au cours de l'entrevue, mais sans elle, il est impossible de faire un choix définitif. C'est le but recherché par cette entrevue.

**Qu'est-ce que l'entrevue ?**

1) Une image : La meilleure façon de décrire l'entrevue est de la comparer à la rencontre de deux vendeurs qui veulent se vendre mutuellement leur produit : c'est le jeu de l'offre et de la demande. Comme le ferait normalement deux honnêtes vendeurs, il s'agit d'abord pour chacun d'eux, d'évaluer le besoin de l'autre. A-t-il besoin du produit ? en quelle quantité ? et selon quelle qualité ?

Après s'être entendu sur les besoins, il y a ensuite la négociation du contrat d'échange.

2) Description d'une entrevue typique.

a) **Procédures préparatoires :** l'étudiant est pré-senti à l'employeur qui prend connaissance de sa demande d'emploi.

b) **Déroulement :** c'est la période des questions entre l'employeur et l'étudiant, ce dialogue leur permettra de mieux se connaître, de mieux se comprendre, enfin, de s'auto-évaluer.

c) **Conclusion :** une certaine entente est faite

# Comment se préparer à une entrevue

ou MIEUX CONNAÎTRE POUR MIEUX CHOISIR !

par: Emile Simard, Directeur,  
Service de Placement des Etudiants,  
CMC — Université Laval.

quant aux procédures subséquentes. Y aura-t-il d'autres entrevues ? Echanges de correspondance; délais à déterminer et communications des décisions de part et d'autre.

## III — Comment se préparer.

- A) Préparation éloignée :
- 1) s'intéresser au marché du travail dès le début de ses études.
  - 2) consulter les services d'orientation et de placement universitaire.
  - 3) préparer un produit de qualité à offrir; s'intéresser à sa matière, dépasser sa spécialité, se donner une personnalité équilibrée et un système de valeur réaliste.
  - 4) prendre ses responsabilités.
- B) Préparation immédiate :
- 1) compléter une demande d'emploi qui est le reflet de soi.
  - 2) soigner sa présentation, reflet de sa personnalité.
  - 3) se renseigner sur l'employeur : le secteur économique où il opère, la région, sa philosophie.
  - 4) consulter la documentation disponible au Service de Placement afin de préciser ses désirs et ses aspirations et avoir déjà une idée de la réalisation chez l'employeur éventuel.
  - 5) obtenir si possible, des renseignements sur des faits précis tels que : conditions d'emploi, climat de milieu du travail, possibilités d'avancement, sphères de spécialisation, programme de perfectionnement, etc. . . .
  - 6) préparer des questions précises.

## IV — Conclusion :

On ne peut pas choisir ce que l'on ne connaît pas suffisamment. C'est pourquoi, votre Service de placement universitaire vous offre sa collaboration dans la recherche d'un emploi convenable et à la préparation de vos entrevues. Ce qu'il recherche, c'est de pouvoir vous être utile. Si vous êtes suffisamment renseignés sur le monde du travail et les emplois disponibles, il vous sera alors facile de décider quel champ d'activités peut le mieux satisfaire vos ambitions et assurer le plein emploi de votre personnalité.

M. Emile Simard est né à Québec où il a fait ses études. Après avoir servi dans l'armée canadienne, durant la guerre 1939-45, comme officier, il entra à l'emploi du Ministère de la Main-d'oeuvre et de l'immigration. En 1954, il est affecté au Service de Placement des Etudiants à l'Université Laval. Depuis 1958, il en est le directeur. Président du "Conseil des Associations des Services Universitaires aux Etudiants" 1970-71. Président de l' "Association de Placement Universitaire et Collégial" 1969-70. Membre du Conseil de "College Placement Council" aux Etats-Unis 1968-70, membre à vie de l' "Association des Anciens de Laval".

l'industrie ou d'un organisme particulier. Presque toutes les entreprises agricoles internationales, nationales ou régionales en Amérique du Nord procèdent à une année à un recrutement assidu pour trouver des jeunes en puissance. Tous les jours, par l'intermédiaire de la vente, des hommes dotés d'une formation scientifique aident des sociétés, des pays, et le monde entier, à produire plus vite les biens nécessaires, à améliorer le niveau de vie de chacun. De toute évidence, les possibilités de carrières dans ce domaine sont illimitées.

Les diplômés en commerce et en administration des entreprises peuvent à tout moment trouver un emploi intéressé parmi les nombreux organismes qui sont en rapport avec le vaste domaine de l'agriculture. Outre les diverses possibilités qu'elles offrent sur le plan métier, ces sociétés ont également un côté passionnant et stimulant car elles touchent aux problèmes de l'agriculture. Nombre de sociétés relevant du domaine agricole ou des sciences biologiques recherchent aussi des employés expérimentés et les diplômés supérieurs des écoles d'administration canadiennes.

Si nous allons maintenant voir le grand nombre de métiers agricoles qui exigent une formation de base en agriculture, ou, pour être plus précis, ceux qui s'offrent aux personnes titulaires d'un baccalauréat en agriculture ou dans certains cas, d'un baccalauréat en sciences (agr.). Ces diplômés occuperont des postes particuliers en tant qu'enseignants au sein des gouvernements fédéral et provinciaux, par exemple ou qu'inspecteurs, dans les industries alimentaires, dans les principales entreprises agricoles spécialisées dans l'une ou l'autre branche de l'agriculture, enfin comme chercheurs dans les domaines techniques de cette discipline.

Le même temps, étant donné que l'agriculture emploie des diplômés d'autres disciplines, ce groupe de personnes ayant une formation agricole est recherché par des industries ne relevant pas directement de l'agriculture. Ainsi, le gouvernement fédéral a nommé récemment monsieur Jack Davis ministre de l'Environnement, et le ministre Robert Shaw, célèbre pour sa brillante administration de l'Expo 67, et dernièrement directeur de l'université McGill. Ces hommes possèdent sans nul doute les qualités nécessaires pour gérer la protection de notre milieu, mais ils seraient les premiers à reconnaître la nécessité d'un personnel compétent en agriculture ou en science biologique pour cerner les problèmes majeurs et leur permettre ainsi d'élaborer une politique bien fondée et saine.

Les banques de crédit agricole ont besoin de personnes nées à la comptabilité bancaire, qui peuvent faire des situations relatives à l'agriculture, non seulement à l'ordre de considérations d'ordre économique, mais aussi tenant compte de l'effet dilatoire des conditions atmosphériques et de l'état du sol, ainsi que d'autres problèmes qui se posent au producteur de denrées alimentaires. Les aciéries engagent des ingénieurs pour estimer et promouvoir la vente et l'utilisation des produits de nos grandes fondrières dans l'agriculture. Il n'est pas besoin d'expliquer pourquoi les fabricants d'automobiles et de tracteurs recherchent des ingénieurs agronomes, mais les diplômés en

l'agriculture comprennent plus difficilement que la presse et la radiodiffusion fassent appel à leurs services. La raison en est bien simple: les deux tiers des programmes radiodiffusés sont consacrés à l'alimentation, la respiration, et à la question de sauvegarder notre santé. Les personnes qui travaillent dans cette branche ou dans la presse écrite doivent savoir quelles sont les questions à poser, et pouvoir comprendre le sens profond des réponses à ces questions.

Mais revenons-en à l'agriculture face au monde du travail. Les employeurs quels qu'ils soient recherchent de "bons éléments". Cela signifie des hommes ou des femmes, et peu importe parfois quelles études ils ont suivies ou quelles notes ils ont obtenues. "Bons éléments" représente, dans la plupart des cas, des individus qui ont un esprit innovateur, le sens du but à atteindre, la volonté de travailler, et le désir d'aller toujours de l'avant. Ainsi donc, l'agriculture offre tous les défis souhaités à l'individu au sein d'une société en évolution: un travail stimulant; de vastes possibilités pour des formations diverses; l'applicabilité et une question clé. Le titre que j'ai choisi pour mon article était banal: "L'agriculture et le monde du travail"; peut-être aurais-je dû l'intituler "L'agriculture est le travail du monde". Si vous avez des qualités créatrices, originales, une certaine formation et des aptitudes pour le travail appliqué, lancez-vous dans l'agriculture; sinon, n'y pensez pas.

produire davantage de lait mais de le distribuer et de l'emballer, ou encore de convaincre les gens qu'ils peuvent produire suffisamment pour faire face à l'explosion de la population. L'agriculture est un sujet dont discutent les jeunes, les moins jeunes et les vieux. Elle représente l'un des facteurs déterminants qui nous permettront de sauver notre monde.

Si l'on considère l'agriculture, il faut être conscient de la place énorme qu'elle occupe dans notre société. Manger signifie être concerné par l'agriculture; nager et boire de l'eau, c'est s'intéresser aux études du milieu; enfin, respirer de l'air pur, exploiter la forêt ou marcher dans l'herbe sont autant de gestes qui nous plongent dans l'agriculture et ses problèmes. Pour être plus précis, débarrassons-nous d'abord de l'idée que cultiver la terre n'est pas digne d'un diplôme. Nous ne sommes plus au temps de la charmante petite propriété, des quelques vaches, du petit potager et de la vie tranquille. Dans les années soixante, l'agriculture avait déjà évolué, avec la politique, la jeunesse et les moyens d'information qui cherchaient à transformer la société sur le plan culturel et moral, à un rythme que beaucoup jugeaient trop rapide. Les nouvelles expériences agricoles sont pro-

qu'une exploitation peut employer plusieurs diplômés universitaires ainsi que des technologues et nécessiter un fond de roulement égal ou supérieur à un million de dollars pour réaliser un bénéfice. Les jeunes gens qui débute aujourd'hui dans de petites unités de production alimentaire font des emprunts auprès des sociétés de crédit agricole, pour des sommes d'au moins \$50,000. Ce n'est pas là un travail pour le dilettante sans instruction ni formation. L'agriculture est une affaire vitale; le bénéfice est trop léger et les besoins alimentaires trop considérables dans le monde pour que nous perdions notre temps avec des gens sans instruction ni formation.

L'évolution actuelle de notre société et le rôle important de l'écologie ont créé un besoin sans cesse croissant de diplômés dans d'autres disciplines que l'agriculture, étant donné l'ampleur de ce domaine. Il existe des centaines d'emplois dans l'agriculture, tels que le journalisme agricole, de la presse ou de la radio/diffusion, pour lequel il est indispensable d'avoir une formation journalistique ou dans l'un des arts libéraux, parfois même les deux. Parce qu'il nous faut former les diplômés en agriculture à l'écriture des articles, il nous faut également initier certains écrivains compétents à l'agriculture. Il faut que le public soit informé pour prendre conscience des réalités, c'est pourquoi il est essentiel que les personnes chargées de ce domaine de l'information soient non seulement compétentes en agriculture et en art d'écrire, mais qu'elles s'intéressent également au milieu où les gens vivent, mangent, travaillent et élèvent leurs enfants.

La technique a apporté à l'agriculture des débouchés impensables il y a cinq ans, qui font appel aux talents des jeunes diplômés du monde entier, grâce auxquels de rapides progrès seront réalisés, apportant aux peuples des pays naissants les moyens de s'aider eux-mêmes. Le but à atteindre non seulement par les ingénieurs agricoles mais par tous les ingénieurs, comporte la réalisation de projets gigantesques tels que la transformation de l'eau de mer en eau douce, en assez grande quantité pour pouvoir irriguer de vastes régions désertiques. L'ingénieur mécanicien, pour sa part, s'attache

au problème complexe du transport de grandes quantités de denrées périssables à travers le monde, au plus bas coût possible. De même, il doit introduire dans les usines de transformation du monde entier ses nouvelles techniques permettant de profiler la production et de réduire les coûts à la consommation, et d'améliorer ainsi le niveau de vie de tout le monde. Les ingénieurs électriques se chargent des problèmes relatifs à la congélation des aliments et au traitement des données par ordinateur et tâchent de trouver des moyens d'utiliser l'énergie électrique pour moderniser l'exploitation agricole à tous les niveaux.

En ce qui concerne la science pure, il faudrait des mortuaires de papier pour décrire les possibilités existant dans le domaine des sciences agraires. Nous nous contenterons donc d'en citer les plus importantes. La microbiologie et ses diverses applications au contrôle de la qualité dans l'industrie alimentaire (solides et liquides) a transformé et va continuer de transformer notre mode de vie. Combinée à la chimie et à l'étude de sols, la microbiologie permet en effet de localiser et de déterminer le genre de pollution qui nous menace; peut-être réussira-t-elle, en temps voulu, à remédier aux maladies qui nous affectent tous. On met au point de nouvelles techniques d'élevage du bétail, permettant d'accroître la production tout en limitant le coût, ce qui réduit également les dépenses du consommateur. Des milliers d'autres domaines s'ouvrent à l'homme de science qui désire rendre notre monde meilleur sur tous les plans, pour les générations à venir.

Bien entendu, il ne faut pas oublier le domaine de la vente, dont on parle depuis des années, et qui offre probablement le plus grand nombre de possibilités d'emploi initiaux. On a dit que la vente n'était pas faite pour le titulaire d'un diplôme supérieur. Pourtant, les débouchés possibles pour des diplômés en science qui pourrissent un but sont innombrables; permettez-moi de m'étendre quelque peu sur le sujet pour ceux qu'une telle affirmation fait sourire. Les vendeurs sont les gens qui font du chercheur ce qu'il est; qui confirment les théories admises; qui soutiennent le producteur et qui font en général découvrir à la société toute la valeur d'une

# l'agriculture et le monde

(QUESTION CLÉ)

le chercheur, l'ingénieur agricole, le financier agricole et le vulgarisateur. Certaines personnes éprouvent une attirance particulière pour la vie en plein air, tandis que d'autres tiennent à la vie de bureau, à l'image du col blanc et au "tourbillon social", et de ce fait l'agriculture n'a pour eux aucun attrait. Ceux qui songent à faire une carrière dans l'agriculture doivent être capables d'affronter des difficultés quotidiennes : la viande qui risque de se gâter, les méfaits d'une nuit de gel, la destruction de récoltes entières par des parasites, ainsi que les périodes de pointe où il faut donner le maximum de soi-même tandis que l'on consacre le reste du temps à la préparation et à la planification du travail. L'initiative est une qualité essentielle dans l'agriculture car c'est un domaine trop vaste pour être l'objet d'une surveillance constante. Il y a, bien entendu, d'autres problèmes, mais ils ne sont pas spécifiques à l'agriculture.

Je vais tenter de définir certains des problèmes qui peuvent se poser à l'agriculteur, ainsi que les divers domaines de formation qui permettront de les résoudre. Si c'est un domaine qui vous intéresse, vous pourrez l'approfondir et vous serez libre d'accepter ou de relever le défi.

L'ère des découvertes touche à son terme en Amérique du Nord. Nous connaissons maintenant notre continent. C'est peut-être dans l'agriculture que cette connaissance est la plus manifeste. Nous avons mis au point de nouvelles variétés de récoltes, de nouvelles méthodes d'exploitation, enfin de nouveaux moyens de contrôle pour lutter contre les parasites et les maladies. En fait, nos efforts ont été si fructueux que nous avons réalisé un excédent et diminué la production, tandis que les autres pays commencent à produire suffisamment pour subvenir à leurs propres besoins alimentaires.

Nous connaissons maintenant nos limites, et nous savons que nos ressources ne sont plus illimitées. Les méthodes que l'on acceptait à une certaine époque sont maintenant inacceptables. Nous avons trop peu de bonne terre, trop peu d'eau claire. Notre problème n'est pas d'obtenir davantage mais de sauvegarder ce que nous avons ; nous devons protéger nos ressources et améliorer celles qui ont été endommagées afin que nos enfants et les générations suivantes vivent au moins aussi bien que nous-mêmes. C'est un énorme but à atteindre. Etant donné que les installations agricoles ont prouvé leur efficacité à résoudre les problèmes alors que nous n'en étions qu'à la phase des découvertes, nous pouvons en toute logique en attendre la même efficacité, lorsqu'il s'agit de sauvegarder la qualité de notre environnement sous tous ses aspects.

Plusieurs professeurs du Collège Macdonald ont voyagé dans le monde entier pour étudier les problèmes auxquels doivent faire face les installations agricoles et les progrès extraordinaires qui sont réalisés dans tous les pays. L'ancienne acception de "l'agriculture" laisse la place à des domaines nouveaux de la science du milieu et du développement des ressources, et les vieilles écoles modernisent leurs programmes au même rythme pour suivre cette évolution. L'agriculture recrute maintenant des spécialistes dans d'autres disciplines, tels que des politiciens qui se battent pour une nouvelle législation relative à l'environnement, des sociologues qui tentent de résoudre les problèmes de l'isolement des jeunes dans les zones rurales, enfin un nombre croissant de scientifiques qui cherchent des moyens non pas de

réduire deux projets définissant les aspects romanesques que je fus chargé d'écrire cet article, je commençais, passionnants et philosophiques de l'agriculture, si que les débouchés qu'elle offre à la génération suivante du monde d'aujourd'hui. Le résultat de ces actions était tout aussi ridicule que la personne qui se d'aborder le problème sous cet aspect. L'agriculture est fondamentalement une question d'audace. A plus sûr, la plupart d'entre vous pensez que l'agriculture présente le travail de la terre et tout ce que cela comporte, et l'article que j'avais tout d'abord rédigé n'aurait été changé à votre opinion. Il en sera peut-être de même pour celui-ci, mais je vous invite à le lire sans idées préconçues. Quant à moi, j'essayerai d'être aussi intégral que possible, et je ne cherche ni à écarter le produit, ni à le persuader, ni même à vous influencer.

l'agriculture est loin de représenter uniquement le travail de la terre, mais elle concerne, d'une façon entre mille, les problèmes de la ferme, de ses produits et de la communauté agricole, et elle est de ce fait soumise à la plus rude que notre société connaisse : la loi et la nature. En général, cela implique des périodes d'activité intense qui exigent le maximum d'efforts de l'homme ou de la femme, tandis que d'autres saisons sont marquées d'une stagnation presque totale.

est certain que la plupart du temps, le travail est toujours le même et très routinier dans l'agriculture. Il faut cela des personnes pour lesquelles travailler, travailler, travailler davantage et plus encore, constituent stimulant.

l'agriculture implique que l'on s'attaque à des problèmes si incertains que le temps, les maladies et les parasites, ce qui n'est pas le cas dans la plupart des autres industries. Avant même d'envisager une carrière dans l'agriculture, il faut avoir assez de ressort pour pouvoir partir avec une énergie nouvelle après un échec. Le facteur de réussite dans le domaine de l'agriculture la ténacité — ne jamais abandonner le cap que l'on s'est fixé — et cela vaut pour le cultivateur comme pour

Monsieur G. P. Henderson, directeur du Centre de Main d'oeuvre du Canada au Collège Macdonald, est né au Québec en 1934, et a passé son enfance dans le sud-ouest de l'Ontario. En 1968, il fut diplômé de l'université Sir George Williams en sciences politiques après avoir abandonné ses études pendant plusieurs années.

Monsieur Henderson a été conseiller en main-d'oeuvre, puis directeur depuis cinq ans, au Collège Macdonald; pendant les cinq années précédentes, il travaillait comme conseiller national en placement dans l'administration, les professions libérales et autres emplois à London (Ontario).

Avant d'entrer à la Fonction publique, Monsieur Henderson a occupé un emploi dans l'industrie de la construction et dans le domaine de la presse et de la radiodiffusion à Sarnia, Ottawa, Toronto, London et Montréal. Il est l'une des rares personnes qui travaillent dans le domaine du placement dans l'agriculture professionnelle, au Canada.

# Bourses d'études, bourses d'entretien et prêts

Le fardeau financier de l'étudiant d'université devient de plus en plus difficile à porter. Il est cependant possible d'obtenir une aide financière de plusieurs sources, mais surtout des programmes de prêts des gouvernements. Précisons que beaucoup d'universités, d'organismes, d'associations et de personnes intéressés à l'éducation accordent des bourses d'études, des bourses d'entretien et des prêts qui permettent d'alléger ce fardeau financier.

Dans une publication intitulée "Bourses de recherches et d'études supérieures", le Bureau fédéral de la statistique donne une liste des bourses qui sont à la disposition des personnes désireuses d'entreprendre des études supérieures. Comme il arrive souvent qu'une bourse soit adjugée à plus d'une personne à la fois, le nombre d'étudiants qui en bénéficient est donc plus élevé qu'on ne le croirait de prime abord. De plus, beaucoup d'organismes qui accordent de telles bourses en adjungent également à des candidats au premier grade.

Il existe de nombreuses sources pour obtenir une bourse d'entretien, mais la plus importante est certainement l'université elle-même. Toutes, ou presque toutes les universités canadiennes, accordent des bourses d'entretien.

Outre ces bourses, dont la plupart ne sont pas remboursables, une autre aide financière est mise à la disposition des étudiants. L'université possède généralement une petite caisse de réserve destinée aux prêts à court terme (généralement exempts d'intérêt) pour les cas d'urgence. Le programme canadien de prêts aux étudiants mis en application par les provinces, garantit les prêts accordés aux étudiants admissibles et paie l'intérêt jusqu'à ce qu'ils aient terminé leurs études. Tout en étant une source d'argent appropriée, ce programme permet de faire bénéficier les étudiants d'un taux d'intérêt avantageux. Pour obtenir des renseignements au sujet des bourses d'études, des bourses d'entretien et des prêts, priez de vous adresser au responsable de l'aide financière dans toute université.

L'annuaire contient trois articles vedettes composés par des gérants de Centres de Main-d'oeuvre du Canada établis sur le campus. Toutefois, il traite d'abord de profils d'employeurs, de descriptions de leurs affaires ou de leurs activités et des diplômés qu'ils recherchent selon le niveau d'étude.

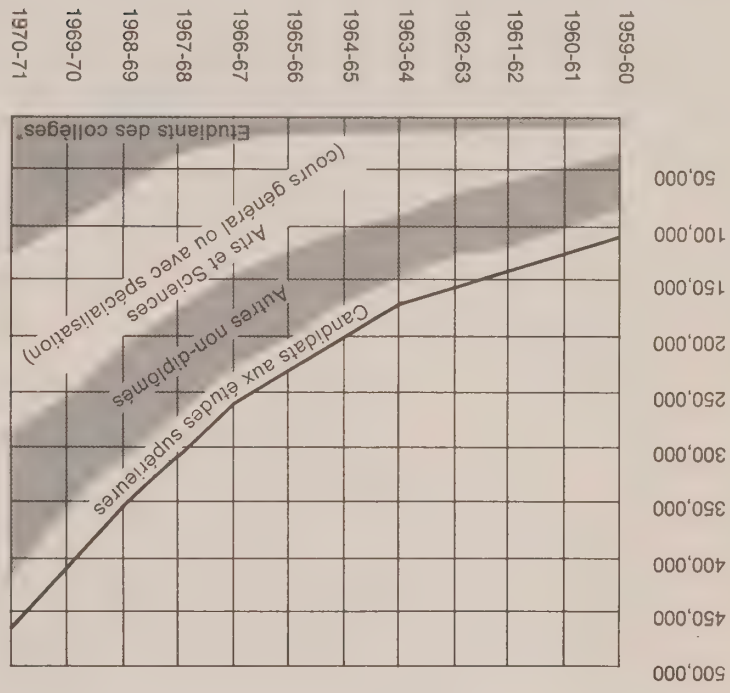

Les index et les recoupements visent à faciliter l'utilisation des renseignements disponibles concernant les employeurs et les occasions d'emploi. C'est pourquoi aussi, un guide, intitulé "Comment utiliser l'annuaire", apparaît à la page iv.

Les inscriptions aux universités et aux collèges canadiens ont fait preuve d'une hausse sensible et soutenue à chaque année. Durant l'année universitaire 1970-1971, environ 330,000 étudiants se sont inscrits aux universités canadiennes. Les étudiants des écoles normales et les élèves du secondaire supérieur des collèges du Québec ne sont pas compris dans ce nombre. Environ 130,000 élèves se sont inscrits aux collèges.

Le graphique I représente les inscriptions aux établissements canadiens d'études supérieures pour les années universitaires 1959-1960 à 1970-1971. Il importe de remarquer que les inscriptions aux collèges n'ont subi qu'une légère hausse d'année en année jusqu'à l'année scolaire 1966-1967, alors que les inscriptions aux différents niveaux de grade ont continuellement augmenté. Cependant, de l'année scolaire 1967-1968 à celle de 1970-1971, les inscriptions aux collèges ont subi une augmentation sensiblement supérieure à celle qu'ont connue les inscriptions aux universités durant la même période, à cause de la fusion de certains établissements d'enseignement supérieur et de quelques collèges. Cette situation est surtout particulière à la province de Québec où la majorité des élèves des CEGEP suivent en fait des programmes pré-universitaires et peuvent poursuivre des études universitaires à la sortie du CEGEP.

Graphique I

Inscriptions aux universités et aux collèges du Canada de 1959-1960 à 1970-1971

\*Comprend les étudiants suivant un programme pré-universitaire.  
Source: Bureau fédéral de la statistique.

Le Canada, comme bien d'autres pays, est en pleine évolution. Plus que jamais, tout est contesté et remis en question. En même temps, l'individu lutte pour garder son identité en cette période de renouvellement accéléré des techniques.

C'est à vous, les jeunes, qu'il incombe de relever le défi que pose une telle évolution. Il vous faut savoir conserver ce que le passé avait de bon, et par ailleurs, trouver des idées et des concepts neufs qui permettront aux Canadiens de vivre dans une démocratie de participation en profitant des nombreux avantages offerts par notre pays. Cet annuaire, qui dresse une liste variée de nombreux employeurs éventuels, a été conçu pour vous aider à choisir un emploi qui corresponde à votre compétence. Je veux croire que le choix que vous ferez vous permettra d'accéder à une carrière avantageuse et enrichissante.

## Comment utiliser l'annuaire

L'annuaire contient trois sections principales : une section narrative, une liste alphabétique des employeurs canadiens et une série d'index (recoupement) servant :

Chaque inscription de la liste alphabétique renferme le nom d'un employeur, son adresse, le nom du responsable du recrutement des diplômés, et une brève description de l'employeur. Dans la mesure du possible nous avons utilisé un format standard pour toutes les descriptions d'employeurs.

Chaque description contient trois rubriques principales à partir du nom et l'adresse de l'employeur : "Activités", "Candidats recherchés" et "Renseignements généraux". "Activités" décrit ce que fait l'employeur, "Candidats recherchés" donne une liste des domaines d'études et des niveaux de diplôme exigés des candidats éventuels et "Renseignements généraux" contient les autres renseignements pertinents. Autant que possible, les seules abréviations utilisées ont été "B", "M", "D" et "E" signifiant respectivement baccalauréat, maîtrise, doctorat et emploi d'été. Cependant, quelques phrases types utilisées tout au long de l'annuaire peuvent exiger des précisions.

Lorsqu'on parle d'emploi d'été, on ne parle que de travail dans une discipline connexe aux études du candidat. L'employeur peut engager des étudiants en vacances pour travailler dans d'autres secteurs, mais cela ne peut être établi à partir des renseignements contenus dans l'annuaire.

Les références aux exigences linguistiques d'un employeur n'ont pas trait à la langue maternelle du candidat. Quand il est dit que l'employeur veut du "personnel de langue française" ou du "personnel de langue anglaise", cela ne veut pas dire ou laisser supposer que la langue maternelle du candidat doit être l'anglais ou le français.

L'index des employeurs est recoupé de trois façons :

- 1) selon la nature de l'entreprise;
- 2) selon la discipline et le diplôme exigé; et
- 3) selon la ville et la province.

SI VOUS CONNAISSEZ LE NOM D'UN EMPLOYEUR A QUI VOUS DESIREZ PRESENTER UNE DEMANDE D'EMPLOI, VOUS N'AVEZ QU'A CHERCHER SON NOM DANS LA LISTE ALPHABETIQUE. CEPENDANT, SI VOUS INTERESSEZ A N'IMPORTER QUEL EMPLOYEUR QUI VEUT ENGAGER DES DIPLOMES DANS VOTRE DOMAINE D'ETUDES, OU A UN EMPLOYEUR DANS UN GENRE PARTICULIER DE TRAVAIL, OU A UN EMPLOYEUR SITUÉ DANS UNE PROVINCE OU UNE VILLE EN PARTICULIER, VOUS POUVEZ ALORS CONSULTER L'INDEX (RECOUPEMENT). LE DETAIL DES RECOUPEMENTS EST CONSIGNÉ À LA TABLE DES MATIÈRES, À LA PAGE III.

Le présent annuaire se propose principalement de fournir aux diplômés des universités et aux agents de placement des renseignements sur les possibilités d'emploi au Canada. L'annuaire est également distribué aux étudiants canadiens à l'étranger et aux agents d'outre-mer du Ministère de la Main-d'œuvre et de l'immigration.

La Division des professions libérales et techniques met à jour d'autres publications concernant l'éducation post-secondaire, lesquelles incluent:

Université, Perspectives de Carrières;  
Collège, Perspectives de Carrières;

Nouveaux diplômés d'université — Offre et demande;  
Demande et salaires — Diplômés d'université;

Demande et salaires — Diplômés de collège.

Tout commentaire ou toute proposition que vous auriez à nous offrir en vue d'améliorer le présent annuaire, doivent être adressés à:

# FOREWORD

The main purpose of the Directory is to provide university graduates and placement officers with information on employment opportunities in Canada. This publication is also distributed to Canadians studying abroad and to officers of the Department of Manpower and Immigration serving overseas. The Professional and Technical Occupations Division produces other publications relating to post-secondary education. These include:

- University Career Outlook
- Community College Career Outlook
- New University Graduates —
  - Supply and Demand
- Requirements and Salaries —
  - University Graduates
- Requirements and Salaries —
  - Community College Graduates

Any comments or suggestions you would like to make regarding this publication may be sent to:

Graduate Requirements Section,  
Professional and Technical Occupations  
Division, Department of Manpower and  
Immigration, Ottawa K1A-0J9 Ontario

# HOW TO USE THIS DIRECTORY

This Directory has three main sections: a narrative, an alphabetically-arranged listing of Canadian employers, and a series of cross-indexes as a guide to the list of employers.

Each entry in the alphabetical listing gives the name of an employer, the address, the name of the officer responsible for recruiting degree-level staff, and a brief description of the employer. As far as possible, a standard format has been used for all employer descriptions.

Each contains three main headings apart from the employer's name and address:

"Activity", "Requirements", and "General Information". "Activity" describes what the employer does, "Requirements" lists the areas of study and degree levels of potential applicants, and "General Information" contains other relevant information. As far as possible, the only abbreviations used are "B", "B-P", "B-H", "M", "D", and "S", meaning Bachelor's, Bachelor's-Pass, Bachelor's-Honours, Master's, Doctoral degrees, and summer employment, respectively. However, a few standard phrases which have been used throughout the Directory may require clarification.

Where "summer employment" is mentioned, it refers only to employment in work related to a discipline of study. The employer may hire vacationing students to work in other capacities, but this cannot be determined from information given in the Directory listing.

References to an employer's language requirements do not refer to an applicant's native tongue. "Requires French-speaking personnel" or "Requires English-speaking personnel" neither mean nor imply that an applicant's native language must be either French or English.

The listing of employers is cross-indexed in three ways:

- 1) by fields of study and degree levels required;
- 2) by type of employer; and
- 3) by city and province

If you know the name of the employer to whom you wish to apply, simply look up his listing in the alphabetical section. However, if you are interested in any employer who might hire graduates from your area of study, or an employer in a particular line of work, or an employer located in a specific city and province, then the cross-index may be consulted. The layout of these cross-indexes is shown in the table of contents on page ii.

Canada, together with other nations, is undergoing a period of great change. Established systems and mores are being questioned as never before and at the same time, the individual is struggling to retain his identity in an era of rapidly changing technology.

It is you, the graduate, who must face the challenge presented by these circumstances. You must preserve what is beneficial from the past yet come forward with new ideas and concepts which will enable all Canadians to live in a participating democracy and enjoy the many advantages our country has to offer.

This directory, which lists a wide range of prospective employers, has been designed to assist you in choosing employment suited to your qualifications which I hope will lead to a satisfying and rewarding career.

A handwritten signature in dark ink, reading "Bryce Mackasey". The signature is written in a cursive, flowing style.

Ottawa  
1972

Bryce Mackasey, Minister

# INTRODUCTION

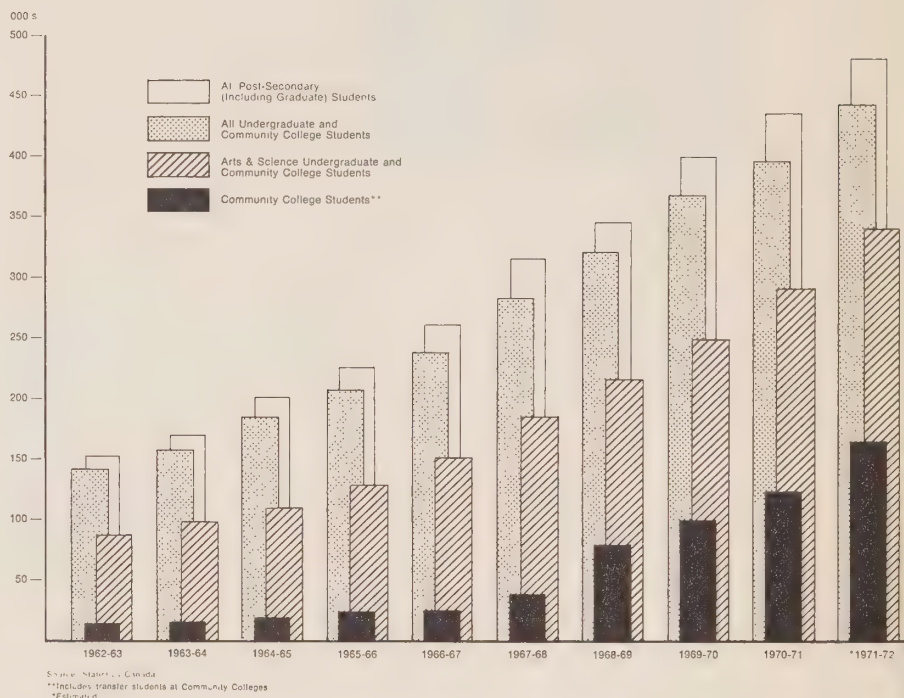

The Directory includes four feature articles by managers of on-campus Canada Manpower Centres. The major part of this publication, however, consists of employer profiles which give a description of the business or activity of employers and the type of graduates they require by degree level.

Indexes and cross-references are provided to facilitate easy usage of the information that is being supplied on employers and employment opportunities. In addition, a guide "How to use this Directory" appears on page iv.

The changing definition of what constitutes a university or community college student, makes it difficult to assess trends and enrolments unless one looks at the overall totals of post-secondary students. This total increased by almost 12 percent, from nearly 430,000 in the 1970-71 academic year to 480,000 in 1971-1972. The 1971-1972 figure included about 310,000 university students and about 170,000 community college students.

The chart illustrates enrolments at Canadian institutions of higher education for the academic years 1971-72. It is of interest to note that, while enrolments at the different university degree levels increased steadily, enrolments at community colleges experienced only a slight annual increase up to the 1966-67 academic year. However, since then community college enrolments have experienced a substantially higher increase than the university enrolments for the same period due to the integration of certain other post-secondary institutions with some community colleges. This is particularly the situation in the province of Quebec, where a large number of the students in the C.E.G.E.P. system are actually university transfer-students and may continue university work following graduation from a C.E.G.E.P.

Figure 1  
Enrolment at Canadian Universities  
and Community Colleges from 1962-63 to 1971-72\*

# SCHOLARSHIPS, BURSARIES, AND LOANS

The financial burden involved in attending university is heavy and is becoming heavier every year. However, funds are available from a number of sources to lighten the load, although government loan plans provide the main share. Many universities, agencies, interested organizations, and individuals offer scholarships, bursaries, and loans to help support university students.

The Dominion Bureau of Statistics publication, "Awards for Graduate Study and Research", lists awards which are available to those undertaking graduate studies. As many of these awards are made to more than one person, the actual number of individual awards is much higher than might appear at first glance. As well, many of the organizations making these awards make similar funds available to undergraduates.

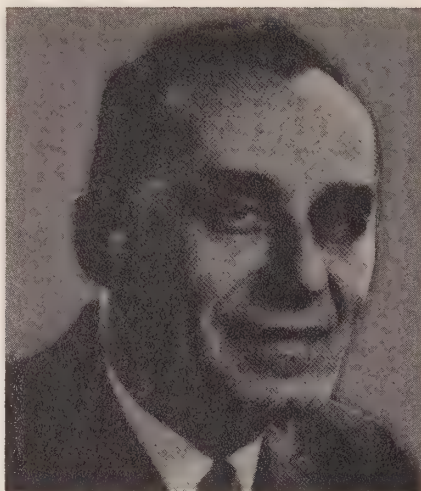

Bursaries are available from many sources, but probably the main source is the universities themselves. All, or nearly all, Canadian universities have limited funds available to provide grants to needy students, as do some service clubs and other organizations.

In addition to these sources, most of which provide non-repayable funds, other financial assistance is available to university students. The university usually has a limited amount of funds set aside for emergency, short-term loans (which are, in many cases, interest-free).

The Canada Student Loan Plan, administered by the provinces, guarantees loans to eligible students and pays the interest on them until the student has completed his studies. As well as assuring an adequate source of money, this plan allows students a favourable rate of interest. Information regarding any of the above can be obtained from the financial awards officer of any university.

# BIOGRAPHICAL SKETCH

## FERNAND M. VILLEMAIRE

Fernand M. Villemaire was born in 1917 in Bourget, Ontario, near Ottawa. He pursued his classical studies at the Ottawa Seminary and at the University of Ottawa until 1938. He later returned to university to study biology and personnel management.

After graduation, Mr. Villemaire operated a food products business and later switched to hotel management.

In 1963 he became a manpower counsellor, and in 1965 was appointed manager of the University of Ottawa campus CMC.

Mr. Villemaire states that coming back to university after some thirty years and being at the service of students is quite an experience and "one that I really cherish."

# WHAT DO YOU DO AFTER GRADUATION?

## JOIN THE DEPARTMENT OF ENVIRONMENT?

During his years of study, the student's main concern is his personal success in those studies, but after graduation he must make a decision about whether he will practise what he has learned or seek any job.

As a first step, it will be rather easy to decide whether to practise his profession, or find a career in industry, in business, or in the public service. Should the last option be chosen, let us examine the kinds of careers to be found through the public service and how training may be applied.

Before a graduate can become really successful, he has "to take inventory" of his skills consistent with his personality and the experience he may have acquired during his years of study. The graduate who has planned his training to suit the demands of a specific career will probably be able to succeed in his chosen field. Without a plan the graduate may find to his disappointment that he is unable to get into a particular career area because his education or knowledge is not in accordance with the stipulated requirements.

Once the graduate is satisfied with his inventory, he will look for the department in the public service that can best use his talents.

Let us, for example, consider how and to what extent the federal Department of the Environment can "absorb" comprehensive disciplines or certain specific skills.

The organizational structure of this department includes various areas of services such as Fisheries; Lands, Forest, and Wildlife; Policy Planning and Research; Water Planning and Operations; Environmental Protection; Air Pollution Control; and Finance and Administration.

The graduate in accountancy or business administration may easily determine that his training has prepared him to fill a position in either finance or administration.

Engineers will realize that fisheries, water planning and operations are areas of work within the department that provide varying career opportunities. They are in an excellent position to contribute to the development of our natural resources and to the conservation of forests, lakes, and rivers. The public service offers a variety of careers to such graduates. The hydrographic service is constantly looking for candidates in mathematics and physics.

Graduates in biology, zoology, ichthyology, ornithology, forestry, chemistry, biochemistry, and botany have many opportunities for employment in such branches of the department as fisheries, lands and forests, and water planning and operations. Research is done in the laboratory and in the field, and graduates could thus use their skills in these challenging areas.

In addition to career opportunities dealing with efforts to control pollution, specialists in ecology, anthropology, and law will also be able to find employment in the department.

The development of our natural resources, the fight to prevent the destruction of species, and the checking of practices that cause pollution are vital challenges for graduates who wish to contribute to the future of Canada.

# BIOGRAPHICAL SKETCH WILF HIEBERT

Wilf Hiebert is the manager of the Canada Manpower Centre at the University of Saskatchewan, Saskatoon. He joined the Department of Manpower and Immigration in 1969 after graduating with a Bachelor of Science degree from the University of Saskatchewan.

Before becoming a manager, Mr. Hiebert worked as Manpower Counsellor at this University until 1969.

## CAREER PLANNING— VETERINARY MEDICINE

Canada has only three universities that offer courses in Veterinary Medicine—the University of Montreal (St. Hyacinthe), the University of Guelph, and the University of Saskatchewan. The Western College of Veterinary Medicine at the University of Saskatchewan, Saskatoon,

is the newest of 21 colleges and schools of veterinary medicine in Canada and the United States. It is fully modern and provides the latest advances in teaching the basic sciences and applying them to the treatment of sick animals. The

College is considered to be the most efficient and up-to-date physical plant for the teaching of veterinary medicine in North America. The building and development of the college is an excellent example of cooperation among the western universities and the federal and provincial governments.

Many people have a stereotyped idea of what a veterinarian is and what he does. They see him as someone who takes care of pets or tends to a farmer's livestock. Hopefully, this article will show the variety of areas in which the veterinarian is involved. He plays an extremely important part not only in the prevention and treatment of diseases in animals, but also in scientific discoveries that have greatly improved the health of mankind. It was a veterinarian who found that insects transmit infection from animal to animal and from animals to man. This discovery led to the conquering of yellow fever, malaria, and tick-borne typhus. A veterinarian doing research on the cause of sweet clover poisoning in cattle discovered dicumarol, an anti-coagulant now used in the treatment of heart disease in humans. A veterinarian was responsible for the discovery of botulism (food poisoning) which led to a major development of the canned food industry. One of the fracture-immobilizing devices now widely used by bone specialists was developed by a veterinarian.

What are the requirements for becoming a veterinarian? Generally, the student must have a high academic standing. At the Western College of Veterinary Medicine, two years of pre-veterinarian training are required, preferably with concentration in the natural sciences, especially biology and chemistry; many applicants have a Bachelor's degree in agriculture or science. There are now more applications for admission than there is space available. At the Western College of Veterinary Medicine, 60 students are accepted each year by an admission committee. Most students are from the western provinces who cooperated in the development of the College, but a number of spaces are allotted to students from other provinces. The professional course leading to a Doctor of Veterinary Medicine requires four years of specialized study. A student can also do graduate work to receive a Master's or a Ph.D. Degree in Veterinary Medicine.

The following outlines the course of study in veterinary medicine. In the first year, basic veterinary sciences are studied to examine and learn the normal structure and function of the animal body. After the first year, the student concentrates on the following areas: veterinarian anatomy — comparative anatomy of major species of domestic animals and the study of the whole animal; veterinarian physiology — function of each of the body systems; veterinarian microbiology — bacteria, viruses, parasites, yeasts, and molds; and veterinarian pathology — disease processes. Veterinarians are also trained in the detection and prevention of disease, clinical diagnosis, surgery, anesthesiology, and the use of electrocardiographs, electroencephalographs, respirators, and radiological equipment. Some areas in which veterinarians can specialize are small animal practice (working with animals such as dogs, cats, and other pets), large animal practice (working with cattle — both dairy and beef, sheep, hogs, and poultry), and equine practice (involving work with horses).

Although the above are the areas usually associated with the practice of veterinary medicine, graduates are diversified and are involved in many other important areas. The federal and provincial governments employ veterinarians for work in public health in the control of zoonosis (diseases that are contacted by animals and passed to man), pet care, prevention of disease in food-producing animals, testing of new drugs, inspection of meats, and prevention of the importation of diseased animals. Veterinarians are active in the prevention and control of disease in wild-animal populations. Research into this area has made substantial contributions to both human and animal health. In all probability, the future will bring the training of aquaculture veterinarians, as Canada and other countries turn toward fish harvest as a source of protein.

Pollution is a major concern of the veterinarian. Because of the increasing accumulation of poisons in our fish, birds, big game, and domestic animals, people with specialized training are needed to maintain a careful watch on the level of toxic material.

What about employment opportunities for veterinarians? The demand is high throughout the world. There is a particular need in under-developed countries, where many diseases of man and animals go unchecked. In Canada, there are approximately 2,200 veterinarians, and this year an estimated 170 graduates will be joining the profession. This is not enough to meet the demand; even with this number added to the work force each year, the need, particularly in the western agricultural economy, is expected to remain great for many years.

# BIOGRAPHICAL SKETCH

## MRS. K. T. HORNE

Born in New Glasgow, Nova Scotia, Kay Horne is a Bachelor of Commerce (Economics) graduate of Saint Mary's University, Halifax.

She has been the Manager, Mount Saint Vincent UCMC, Halifax, for the past five years and was recently appointed Acting Manager of the Dalhousie UCMC. Prior to joining the Department, Mrs. Horne was with the Department of the Environment (Fisheries) for six years.

# LIFE SCIENCES IN INDUSTRY

Man's survival in his environment depends to a great extent upon the natural resources within that environment. Skilled scientists are needed to locate, extract, process, and develop these natural resources to obtain from them the maximum benefit.

Training related to the study of our environment and the structure of the earth includes the interrelated fields of oceanography, geology, and geophysics.

The year-old Life Sciences Centre on the Dalhousie University campus in Halifax houses the Institute of Oceanography, which works closely with the Bedford Institute, the National Research Council Atlantic Regional Laboratory, the Fisheries Technological Station, the

Naval Research Establishment, and the Nova Scotia Research Foundation. The Institute trains graduate oceanographers, and serves as a research centre for advanced studies in marine sciences. Many industries, particularly those in the petroleum field, require the services of oceanographers. However, the largest employers of those trained and experienced in oceanography are universities and federal government agencies engaged in marine and freshwater research.

Interest in the field of geology continues to grow, since the study of the structure of the earth's surface and subsurface is essential if there is to be a greater understanding of the forces and events that have formed and are still forming the earth.

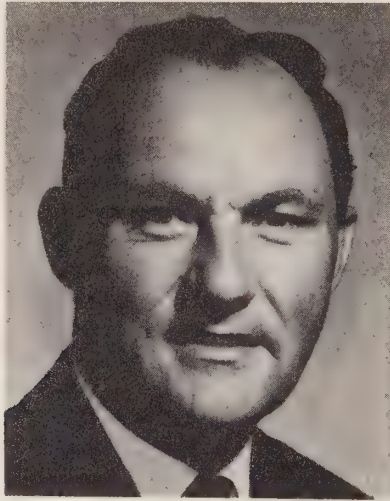

Two branches of geology that may be considered environmental in nature are marine geology and hydrogeology. Marine geologists are employed by federal or provincial governments and by exploration companies. Petroleum companies employ geologists with experience and training in marine studies to aid in gas and oil exploration in Canada's offshore waters, mainly off the Nova Scotia and Newfoundland coasts.

Governments and universities and, on a smaller scale, industry, are concerned with water scarcity, a problem that becomes more serious daily. To assist in their search for a solution to this problem, they require the services of hydrogeologists, who make a geological study of ground water.

Geophysics is primarily concerned with the scientific examination of the structure and composition of the earth, its water areas, and its atmosphere. Many geophysicists are employed by mining and oil companies, mainly in the exploration field, while others fill positions in the federal and provincial governments. Teaching and research positions are available at the university level for those with a Ph.D. degree.

# BIOGRAPHICAL SKETCH

## BILL THOMAS

Bill Thomas graduated from McMaster University in 1949 with a B.A. degree. He held positions in sales management and public relations until 1963 when he joined the Department of Manpower and Immigration. Mr. Thomas worked in the Executive and Professional division of the Hamilton office until October 1965, and then transferred to McMaster University. He has since assumed the position of Manager of the Canada Manpower Centre on campus.

# THE GRADUATE'S SEARCH FOR EMPLOYMENT IN INDUSTRY

The following article outlines the steps the graduating student should take in finding employment. Because of my experience in the heavily industrialized Hamilton area, it was felt that my suggestions might be of assistance to graduating students in other parts of the country. The methods of obtaining industrial employment could be the same as methods suggested for our students. It has become increasingly evident to graduating students that excellent opportunities exist within the industrial complex — primary steel, rubber, metal fabricating, and so on — and they have, therefore, been very anxious to gain their share of these rewarding positions. However, the constantly increasing numbers of university graduates and the current economic situation have created a very disturbing problem with which current graduating students must contend. I refer to the imbalance in the student-job ratio and the current practice of employers to hire only the top students.

It must also be noted that most employers do not wish to limit their recruiting to one or two universities. They recruit at many institutions to maintain their contact with them, and also to hire a few of the top calibre students. These factors all have definite bearing on the students' chances of attaining employment in industry. It is therefore essential that students realize the competitiveness that exists in today's industrial employment market. They should explore all possible means of locating their chosen area of employment within that market.

As a guide to these students, I have listed below some of the steps they might consider in their search for such employment.

In compiling this information, I contacted the personnel divisions of several of Hamilton's largest industries. I talked to the people responsible for university recruitment and asked them what they thought a student might do to enhance his prospects of employment.

1. Make use of the Student Placement Office on campus. Talk and listen to the counsellors in that office and discover those particular industries interested in graduates with your qualifications. Obtain literature — brochures, company information sheets, etc. — study it to find out what the company does, what its products are, where plants are located, etc. Note particularly the various job descriptions that are included with this literature to see whether there is a job that fits your qualifications and interests you. Make a list of companies including their addresses, telephone numbers, and the names of the people responsible for on-campus recruiting. Arrange for interviews with representatives of companies when they recruit on campus.

2. Phone the companies. Talk to the University Recruitment Coordinator. Let him know that you are interested in working for his company. Tell him of your academic qualifications and any pertinent past employment experience. Let him know that you are aware of his recruitment information and where you think you would fit into the organization. Such a discussion indicates initiative and drive on your part and will quite often lead to an invitation by the employer to meet him in his office for a personal interview.

However, if the employer indicates an interest in you during the phone call, but says he has nothing at present, he may request that you mail him a personal résumé which he will file for consideration when a suitable vacancy arises.

3. You may obtain a personal information form from your student placement office and use this as your form. I would suggest, however, that you include a detailed résumé, and indicate to the employer that you have talked to him on the phone.

Remember, the more information you include in your résumé — academic qualifications, student activities including club memberships, offices held, etc., and any past employment — the better will be your chances for a personal interview.

4. If you wish to use a more forceful approach, make a personal visit. Arm yourself with the company address and the name of the person responsible for university recruitment and go directly to his office and request an interview. Before doing this, of course, you should have the information discussed in Step 2 and should have your personal résumé with you. Such preparation on your part indicates initiative, which will not go unnoticed by the person who interviews you.

5. Consider registering with the Technical Service Council. This is a non-profit organization composed of representatives of employers in business and industry that assists its clients in obtaining suitably qualified personnel. You may find that the TSC has vacancies listed for the companies in which you are interested.

6. Contact former graduates from your course of study who are now employed in industry. These persons could be very helpful by advising you on company policy, promotion possibilities, working conditions, etc., which could help you to decide whether or not you should seek employment with that firm. They might also be aware of vacancies and could advise you as to the person you should contact, if you do wish to be considered for employment.

7. Attendance at career days or seminars is worthwhile. The student placement office invites representatives from industry to come to your campus to speak to students concerning their industry — what it has to offer.

These speakers afford an excellent opportunity for students to ask questions and receive answers that could help them make a decision.

8. You should also make a special point of reading the "Careers" sections in newspapers. These are a good source of information about career openings. Most major industries advertise in the paper, copies of which are usually available in your student placement office.

9. Your local Chamber of Commerce is a source of employment leads. Write or drop in to see one of the members and discuss with him your employment preferences.

10. Do not overlook your friends and relatives who are employed in industry. They may be of valuable assistance. I feel that your primary and continuing point of contact should be the student placement office on your campus. It is there to assist you. Major industry recruits on campus by arrangement with the placement office.

These steps are not the only ones, but by applying yourself diligently to them you will be in a better position to obtain employment in the industrial world. Students must be alert, active, and "on-the-ball" to find their place in industry. Employers have told me repeatedly that they are looking for the self-starter and the go-getter, or the student who can "sell himself".

A list of campus offices where students or graduates may seek help is given later in this publication.

# NOTES

# NOTES

**ACADIA UNIVERSITY,**

Dr. J.M.R. Beveridge, President,  
Wolfville, Nova Scotia.

**Activity**

Acadia University offers bachelor's and master's degree in arts and science. It also offers courses leading to a bachelor's degree in education, business administration, science (home economics, physical education), music, theology, and divinity. It grants diplomas in Education and Secretarial Science, a certificate in Applied Science and licentiate in Music. The University also operates a library serving its students and the citizens of Wolfville.

**Requirements**

Biology, Chemistry, Mathematics, Physics (D)  
English and French languages and literatures,  
History (D)  
Political Science, Psychology, Sociology (D)

**General Information**

Recruits when necessary. Personnel must be English-speaking. Acadia University is a co-educational institution with a total enrolment of 2,054 students and a teaching staff of 144. Its library has a staff of 43 including some student assistants and an annual circulation of 60,000 books.

**ACRES CONSULTING SERVICES LIMITED FOR H.G. ACRES LIMITED;**

Niagara Falls and Toronto, Ontario.

Mr. B.H. Goodings,  
Director Personnel Services,  
20 Victoria Street,  
Toronto, Ontario.

Acres Atlantic Limited; Halifax, N.S.

Acres Intertel Limited; Ottawa, Ontario

Acres Quebec Limited; Montreal, Quebec

Acres Western Limited; Vancouver, B.C.,  
Calgary, Alberta

Acres International Limited; Niagara Falls,  
Ontario.

**Activity**

Acres Consulting Services Limited embodies a group of companies offering world wide consulting services in the areas of Energy Systems, Resource Development, Town and Regional Planning and in the design, supervision and management of large scale construction projects.

**Requirements**

Engineering: Chemical and Mining (B,M)  
Civil, Electrical, Mechanical and Geological  
(B,M,D) (S)

Computer Sciences (B)

Urban and Regional Planning (B,M,D)(S)

Economics (B,M,D)(S)

Commerce and Business Administration (B,M)

Geography (B,M), Biochemistry and Biology  
(B,M,D)

Library Science (B)

**General Information**

Recruits year-round. Recruiting literature is available. Personnel must be English-speaking. Other languages are a definite asset for overseas assignments. There is a summer employment program. Acres is a Canadian-owned and based company with international operations. Subsidiaries recruit personnel individually and through the head office.

**ADAMSON AND ASSOCIATES,  
GORDON S.**

Mr. Howard J. Aitken, Controller  
123 Eglinton Ave. East,  
Toronto 12, Ontario.  
(Tel. No. 481-2273)

**Activity**

Gordon S. Adamson and Associates specialize in University buildings, office buildings, schools, industrial buildings, and warehouses; structural design of such structures in conjunction with architectural design.

**Requirements**

Engineering: Civil (B)(S)  
Architecture (B)(S)

**General Information**

Recruits as necessary. Applicants must be able to write and speak English fluently. Specialization in structural engineering for buildings preferred.

**AGE AND OPPORTUNITY CENTRE INC.,**

Mrs. E. Shapiro, Executive Director,  
204, 322 Donald Street,  
Winnipeg 2, Manitoba.

**Activity**

The Age and Opportunity Bureau provides counselling and rehabilitation services to the older, usually retired, citizens of the community and their adult children. It also stimulates community interest in the problems of older citizens. It has established a day centre as well as many committees on housing, leisure time, and related subjects.

**Requirements**

Liberal Arts (any discipline) (B)  
Social Work (B,M)  
Education (B)

**General Information**

Recruits when necessary. Personnel must be English-speaking. There is a summer employment program. The Age and Opportunity Bureau has three professional workers on staff as supervisors of case work, group work, and adult education programs. Three supervisors are responsible for the operation of 3 full-time day centres. The professional staff works closely with volunteer groups.

**AIR CANADA**

Mr. Jean Charland  
Supervisor Professional Recruiting,  
37th Floor, Place Ville Marie,  
Montreal 113, Quebec.

**Activity**

Air Canada provides passenger and cargo air services to major centres in Canada, the United States, Europe, and the West Indies (including Bermuda and the Bahamas).

**Requirements**

Psychology (M)  
Mathematics (B,M), and Computer Sciences  
(B)  
Engineering: Aeronautical, Industrial and  
Mechanical (B)  
Commerce and Business Administration (B,M)

**General Information**

Recruits as necessary. Bilingualism is an asset, and a requirement for many public contact positions. There is a summer employment program. Employment is available in Montreal and Toronto.

**ALBERTA, GOVERNMENT OF**

The Director of Recruitment and Selection,  
Mr. J.C. Cels, Director of Departmental  
Services

Room 500, Terrace Building,  
Edmonton, Alberta.  
(Tel. No. 229-4451)

**Activity**

The Personnel Administration Office is responsible for staffing all departments of the Government of Alberta.

**Requirements**

Regional Planning (M), Social Work (B,M)  
and Urban Studies (M)  
Medicine (D), Occupational Therapy (B)  
Speech Therapy (B) and Medical Librarian (B)

**General Information**

Recruits year-round. Recruiting literature is available. Employment is offered throughout the Province but mainly in Edmonton and Calgary. Personnel must be English-speaking. The provincial government departments are listed below:

Agriculture  
Attorney General  
Culture, Youth and Recreation  
Education  
Northern Alberta Institute of Technology  
Southern Alberta Institute of Technology  
Highways and Transport  
Industry and Tourism  
Labour  
Lands and Forests  
Mines and Minerals  
Municipal Affairs  
Provincial Auditor  
Provincial Secretary  
Health and Social Development  
Public Works

**ALBERTA GOVERNMENT TELEPHONES,**

R.C. Steedman, Supervisor,  
Employment South,  
P.O. Box 6000,  
Calgary 1, Alberta.

**Activity**

Alberta Government Telephones provides total communication facilities and services to the province of Alberta.

**Requirements**

Economics, Sociology and Psychology (B)  
Architecture (B)  
Engineering: Civil (B), Electrical (B),  
Mechanical (B)  
Computer Sciences (B)

**General Information**

Recruits from November to January. Recruiting literature is available. Employment is available at Edmonton, and Calgary. English-speaking personnel required.

**ALBERTA RESEARCH COUNCIL**

see — The Research Council of Alberta.

**ALBERTA, PROVINCE OF,**

Oil and Gas Conservation Board,  
Mr. R.F. Braun, Personnel Manager,  
603-6th Avenue S.W.,  
Calgary 1, Alberta.

**Activity**

The Board controls the imprudent use of gas and oil by regulating drilling, production and secondary recovery, and also controls removal of gas from the Province. It evaluates and approves experimental and commercial projects for oil sands production.

**Requirements**

Economics (B,M)  
Engineering: (any discipline) (B,M) (S)  
Geology (B,M) (S), Computer Sciences (B,M)

**General Information**

The normal recruiting period is from October 1 to March 1. Personnel must be English-speaking. Recruiting literature is available. The Oil and Gas Conservation Board of the Province of Alberta offers a summer employment program. Employment is offered in Calgary, Edmonton or Red Deer, Alberta.

**ALBERTA WHEAT POOL,**

A.C. King, Office Personnel Director,  
505-2nd Street, W.,  
Calgary, Alberta.  
(Tel. No. 267-4910)

**Activity**

The Alberta Wheat Pool is an agricultural co-operative, owned by some fifty-two thousand farmers, and is engaged in the marketing of grain, forage, cereal seed, fertilizer and chemicals. It operates five hundred and thirty local elevators, and two major grain terminal elevators in export positions.

**Requirements**

Computer Sciences (B-P)  
Economics (B-P)  
Commerce and Business Administration (B)  
Agriculture (B)  
Engineering: Agricultural (B)

**General Information**

Recruits as necessary. Personnel must be English-speaking. The Alberta Wheat Pool operates five hundred and thirty elevators throughout the Prairies and British Columbia with a staff of one thousand and two hundred.

**ALBERY PULLERITS, DICKSON & ASSOCIATES LTD.**

Mr. M.D.H. Dickson, Vice-President,  
29 Gervais Drive,  
Don Mills, Ontario.  
(Tel. No. 429-2920)

**Activity**

Albery Pullerits, Dickson & Associates Ltd., is a consulting engineering and construction firm specializing in marine, heavy construction, and water and sewer services.

**Requirements**

Engineering: Civil (B,M)(S) Mechanical (M)

**General Information**

Recruits as necessary. Employment is offered at Sudbury, Toronto, and Welland, Ontario, and Halifax and Port Hawkesbury, Nova Scotia. English-speaking personnel are required.

**ALCAN**

see — Aluminum Company of Canada Limited

**THE ALGOMA STEEL CORPORATION, LIMITED,**

Steel Works Division, Sault Ste. Marie,  
Ontario,  
Algoma Ore Division, Wawa, Ontario,  
Canadian Furnace Division, Port Colborne,  
Ontario.

Mr. T.S. McDonald, Personnel Officer,  
Algoma Steel Corporation Limited,  
Queen Street, W.,  
Sault Ste. Marie, Ontario.  
(Tel. No. 254-5111)  
(Hires graduates from all three firms)

**Activity**

Algoma Steel Corporation Ltd. is a primary producer of iron, steel coke and by-products, coal, iron ore, and limestone.

**Requirements**

Computer Sciences (B-H)  
Commerce and Business Administration (B,M)  
Engineering: Electrical (B), Industrial (B),  
Mechanical (B), Mining (B), Geological (B),  
and Metallurgical (B,M)  
Mathematics (B-H) and Metallurgy (B-H,M)

**General Information**

Recruits as necessary. Recruiting literature is available. Employment is offered primarily at Sault Ste. Marie (Main Plant) and at Wawa (Mining Operation) in Ontario. At present the Sault Ste. Marie, Wawa, and Port Colborne operations employ approximately 8,500, 808 and 46 personnel, respectively. Personnel must be English-speaking. There is a summer employment program.

**ALLIANCE MUTUAL LIFE INSURANCE COMPANY**

Mr. Gilles Guérin, Director of Employment,  
680 Sherbrooke Street West,  
Montreal, Quebec.  
(Tel. No. 849-2491)

**Activity**

Alliance Insurance Company offers individual life insurance policies, group life and health insurance policies and pension plans.

**Requirements**

Economics (B-P), Computer Science (B-P) and  
Mathematics (B-P)  
Commerce and Business Administration (B)  
Law (B)

**General Information**

Insurance in force: \$1,609,130,000 (individual and group). Alliance Mutual has a staff of 270, with 24 branch offices. Its head-office is located in Montreal, with branch offices in the major cities in Quebec. The personnel must be French-speaking or bilingual. Recruits as necessary. Recruiting literature is available.

**ALLIED CHEMICAL (CANADA) LIMITED,**

W.M. Moore, Personnel Supervisor,  
1155 Dorchester Blvd. W.,  
Montreal 102, Quebec.  
W.G. Danby, Personnel Supervisor, for local  
employment;  
Brunner Mond Plant,  
Amherstburg, Ontario.

**Activity**

Allied Chemical (Canada) Ltd. manufactures and markets a wide range of heavy industrial and some fine chemical products for both the industrial and consumer markets. The Brunner Mond Plant is one of the Canadian members of the Allied group. It produces soda ash, calcium chloride and aluminum chloride.

**Requirements**

Engineering: Chemical and Mechanical (B)

**General Information**

Recruits from November 15 to January 15. Allied Chemical offers employment at locations in Valleyfield, Quebec, and Amherstburg, Ontario. Recruiting literature is available. Bilingual candidates preferred.

**ALLSTATE INSURANCE COMPANY OF CANADA,**

Mr. Douglas E. Lear, Canadian Personnel  
Manager,  
790 Bay Street,  
Toronto, Ontario.  
(Tel. No. 493-0550)

**Activity**

#### **BRISTOL AEROSPACE (1968) LIMITED**

Mr. F.L. Hinings  
Personnel Manager  
P.O. Box 874  
Winnipeg 1, Manitoba.

##### **Activity**

The company operates a modern manufacturing facility and is a pioneer and innovator in the precision fabrication of modern high strength alloys and high temperature and corrosion resistant alloys. A principal area of manufacturing is the fabrication of major welded jet engine components for leading gas turbine engine manufacturers. Included in special alloy fabricating work at Bristol is the design and manufacture of nuclear research equipment. The Company is also engaged in the design and manufacture of filament wound and reinforced plastic components including pressure vessels, rocket nose cones and other structures employed in undersea, land and airborne applications.

Paralleling its activities in manufacturing, Bristol is a major contractor to military and civil customers in the inspection, rework, and modification of aircraft. Aircraft types range from supersonic fighters through a variety of civil

utility aircraft to helicopters. In the field of aircraft service, Bristol manufactures various auxiliary equipment. Included are Bristol designed retractable wheel skis for winter and far northern conditions, seaplane floats for amphibious landing capability and equipment to improve aircraft performance.

Technical support to the aircraft departments is concerned with the numerous aspects of aircraft system installations including electrical, radio, instruments and hydraulics, together with structural analysis and aircraft assembly.

A major engineering activity at Bristol is the design and development of Black Brant rockets and space vehicles for use in upper atmosphere research. This activity involves the development of advanced technology in many directions.

In the main departmental divisions of vehicle design, propulsion, instrumentation, and launch services, engineering and technical personnel are involved in rocket structure design, propulsion and flight research, propellant processing and casting, design and development of rocket-borne telemetry and electronic instrumentation and launch services at rocket ranges. In addition to functions already mentioned, personnel are employed in engineering development for the manufacturing and aircraft departments.

#### **Requirements**

Engineering: Mechanical, Aeronautical and Electronic (B,M)

#### **General Information**

Recruits as necessary. Personnel must be English-speaking.

### **BRITISH COLUMBIA CIVIL SERVICE COMMISSION**

Mr. K.M. Hanson, Senior Selection Officer, Parliament Buildings, Victoria, British Columbia.

**CANADA - GOVERNMENT OF**

Director, (indicate specific program)  
Public Service Commission,  
Tower "A", Place de Ville,  
Ottawa, Ontario.

**Activity**

The Public Service Commission of Canada is the staffing body of the Federal Public Service, the largest employer with the greatest variety of occupations in Canada.

Within the Public Service Commission are staffing programs responsible for recruiting university graduates from bachelor to doctorate level. The Public Service Commission recruits for more than fifty government departments and agencies. Commission headquarters are in Ottawa with Regional Offices located across Canada.

**THE ADMINISTRATIVE MANPOWER RECRUITMENT AND DEVELOPMENT PROGRAM**

Recruits graduates in Commerce, Arts, Computer Sciences and Business Administration, and is responsible for providing a continuous

flow of skilled administrators to the Public Service.

Administrative trainees are placed in a variety of learning situations in various areas of the Public Service. Provided with these opportunities, the trainee develops a sense of responsibility and the capacity to integrate rapidly within departments and agencies of the Public Service of Canada.

**THE APPLIED SCIENCES PROGRAM**

Recruits engineers in all disciplines. Most requirements are for graduates at the bachelor level.

**THE BIO-PHYSICAL SCIENCES PROGRAM**

Recruits bachelor graduates in chemistry, pharmaceutical chemistry, agriculture, forestry and physics-mathematics. A limited number of masters graduates are required for research in a variety of specializations in the biological, physical and related sciences.

**THE SOCIAL-ECONOMIC PROGRAM**

Recruits all types of economists and has a need for those with specialties in transportation, resource economics and regional development. Statisticians and Mathematicians are also required. There is a growing requirement for post-graduates possessing specialization in these disciplines.

This program also recruits lawyers, librarians, historical researchers and translators.

**General Information**

The normal university recruiting period for first degree graduates is October to January; for post-graduate degree holders, year-round. Literature regarding employment opportunities with the Public Service of Canada is available to Canadian students at their campus placement offices. English and French-speaking personnel are required.

Employment is offered across Canada and, for those in the Foreign Service Officer category, in 70 countries around the world. However, in the Sciences and Social Sciences opportunities are largely restricted to the Ottawa-Hull area. There is a summer employment program. Although a limited number of positions are filled by departments recruiting independently, all applications sent to the above address will receive full consideration. The various departments of government are listed below:

Agriculture Communications  
Consumer and Corporate Affairs  
Energy, Mines and Resources  
External Affairs  
Finance  
Fisheries and Forestry  
Indian Affairs and Northern Development  
Industry Trade and Commerce

#### **DOMINION GLASS COMPANY LIMITED,**

Mr. Andrew Falconer, Employment Manager,  
P.O. Box 190,  
Montreal 101, Quebec.

##### **Activity**

Dominion Glass Company Limited is the largest Canadian supplier of glass containers and tableware. The 1970 sales volume was \$76,-861,499. Glass container manufacturing plants are located in Montreal, Quebec, Bramalea, Hamilton and Wallaceburg, Ontario, Redcliff, Alberta, and Burnaby, British Columbia. A modern plant in Etobicoke, Ontario, has been producing polyethylene and polyvinyl chloride (PVC) plastic containers since 1965. A subsidiary, National Pressed Glass Limited, located in Brantford, Ontario, produces specialized glass products other than containers. Since its formation, in 1913, Dominion Glass has worked continuously to improve operating techniques and facilities. In 1936, the Company was the first in Canada to use the silk screen (A.C.L. - Applied Colour Lettering) process for decorating glass containers on a commercial scale. In 1940 Dominion Glass obtained the exclusive Canadian rights to the use of the Hartford-Empire "IS" (Individual Section) machine. This was the most important breakthrough in forming, since the first automatic bottle-making machine, the "Owens", was introduced in 1903. In 1967, Power Corporation of Canada Limited, acting primarily as an investment holding company, became a major stockholder of Dominion Glass. A multi-million dollar modernization and expansion programme began in 1967 has brought all plant facilities up to the latest standards in the North American glass container industry. The programme encompassed every plant, culminating in the new plant at Bramalea, Ontario, in September, 1970. These improvements in production facilities, along with a streamlining and strengthening of the whole management team, and a modern service organization, keep Dominion Glass in the vanguard of the industry. They provide the capability for supplying, in quantity, the quality demanded by customers in the food, beverage, toiletries, pharmaceutical and cosmetics industries.

##### **Requirements**

Physics (B,M)(S)

Joy Manufacturing Company (named for its founder, the late Joseph F. Joy) is a leading designer and manufacturer of diversified industrial equipment. Closely-related to the energy field, the company pioneered the mechanization of the coal mining industry and today is a leading supplier of high-production mining machines. It provides the oil and gas industry with both exploration and production tools. Its minerals and metals mining equipment and ore processing systems provide uranium for nuclear energy. The company's air pollution control systems are utilized at power plants to prevent the generating of electrical energy from harming the atmosphere. The company operates 16 plants in the United States and nine in foreign countries. It recently established an Advanced Development Center at Galt, Ontario for the study and design of new hard-rock mining systems. The company's products are available in virtually every country open to U.S. commerce and about one-third of the company's sales are now made abroad. A quarter of Joy's 10,300 employees work at facilities outside the U.S. Joy has its headquarters at the Henry W. Oliver Building, Pittsburgh, Pa. 15222. The Canadian company is located in Galt, Ontario where Manufacturing & Research and Development activities take place. Other Canadian divisions are located in North Bay, Winnipeg, Montreal, Toronto. Over 800 people are employed by JOY in Canada.

#### **NOVA SCOTIA COLLEGE OF ART AND DESIGN**

Mr. Garry N. Kennedy, President,  
 6152 Coburg Road,  
 Halifax, Nova Scotia.

##### **Activity**

The Nova Scotia College of Art and Design is an institution of higher education engaged in teaching courses leading to the diploma or the bachelors degree in fine arts, communication design, or environmental design. Students in the fine arts degree program may take courses which qualify them for a teacher's certificate of the province of Nova Scotia as an art specialist. The communications design program deals with the design of printed materials and design of other communication forms and systems. The environmental design program is concerned with the design of manufactured objects, interior and exterior spaces, and transportation linkages. Students select their own specialization within these areas.

NOTES

NOTES

**M.S. YOLLES ASSOCIATES LIMITED**

Monsieur M.O. Man  
Contrôleur  
85, rue Richmond ouest  
Pièce 812  
Toronto 1 (Ontario)

**Activités**

La société M.S. Yolles Associates Limited, ingénieurs-conseils, s'occupe d'études de constructions de tous genres: commerciales, institutionnelles, industrielles, domiciliaires et autres bâtiments fonctionnels. Cette société s'occupe également de surveiller l'exécution de travaux de construction. Elle prépare des rapports à la suite de recherches qu'elle effectue sur des problèmes spécifiques de la structure, ou encore, sur la praticabilité de la structure. Cette société conçoit aussi les plans de systèmes de structure spéciaux ou complexes.

**Candidats Recherchés**

Génie: (structurel) (B,M,D)

**Renseignements généraux**

Le recrutement du personnel se fait à l'année longue. Le personnel doit parler l'anglais. La société M.S. Yolles Associates Limited offre de l'emploi seulement en Ontario. On peut se procurer de la documentation sur le recrutement.

**YORKTON PUBLIC SCHOOL DISTRICT**

**NO. 159**

Monsieur M.C. Knoll  
Surintendant des écoles  
School Administration Building  
Rue Darlington et avenue Myrtle  
Yorkton (Saskatchewan)

**Activités**

Le District No 159 des écoles publiques de Yorkton accueille les élèves et leur dispense l'enseignement de la première jusqu'à la neuvième année, y compris des classes spéciales. Ce district comprend sept écoles élémentaires et une école moyenne.

**Candidats Recherchés**

Éducation physique (B)  
Pédagogie (B) et Psychologie (B)

**Renseignements généraux**

La période de recrutement s'étend normalement du 1er mai au 30 juin. On peut se procurer la documentation pertinente. Le District No 159 des écoles publiques de Yorkton dessert la ville, où toutes les écoles sont situées. Un personnel de 92 membres dispense actuellement son enseignement à quelque 1,900 étudiants, qui résident tous dans la ville.

**YORKTON SCHOOL UNIT NO. 36**

Monsieur T.B. Jolson  
Surintendant des écoles  
91, rue Broadway est  
Yorkton (Saskatchewan)

**Activités**

La division secondaire no 36 de Yorkton comprend 24 écoles, dont deux offrent des classes de la première à la douzième année et dix, des autres enseignent de la première à la septième année. On trouve en outre dans ces écoles des classes spéciales et des cours de métier. Deux de ces écoles sont situées dans la ville et les autres dans la région environnante.

**Candidats Recherchés**

Arts libéraux et Sciences sociales (toutes disciplines) (B)  
Sciences physiques et naturelles (toutes disciplines) (B)

**Renseignements généraux**

Le recrutement se fait au besoin. Le personnel doit parler l'anglais; deuxième langue utile. La division scolaire no 36 de Yorkton possède un personnel enseignant de 105 membres qui dispensent son enseignement à 2,300 élèves. Des résidences sont disponibles pour le personnel enseignant.

**YORKTON SEPARATE SCHOOL**

**DISTRICT NO. 32**

Monsieur M.C. Knoll  
Surintendant des écoles  
C.P. 627,  
Yorkton (Saskatchewan)  
(No de Tel. 783-8576)

**Activités**

Le district des écoles séparées de Yorkton accueille les élèves et leur dispense l'enseignement de la première à la huitième année; ce qui comprend aussi quelques classes spéciales. Il y a trois écoles élémentaires dans le district.

**Candidats Recherchés**

Pédagogie (B)

**Renseignements généraux**

La période de recrutement s'étend normalement du 30 avril au 15 juillet. On peut se procurer la documentation pertinente. Le district des écoles séparées de Yorkton dessert la ville, où toutes les écoles sont situées. Un personnel de 28 instituteurs enseigne actuellement à quelque 600 étudiants, qui résident tous dans la ville. Le personnel doit parler l'anglais.

**YOUNG MEN'S CHRISTIAN ASSOCIATION**

Monsieur M.B. Shantz  
Directeur du personnel  
2160, rue Yonge  
Toronto 295 (Ontario)  
(No de Tel. 485-9447)

## HOPITAL PSYCHIATRIQUE DE LONDON

Monsieur Edward C. Likeness, Agent du

personnel

Casa postale 2532, station terminale 'A'

(No de Tel. 455-5110)

### Activités

L'Hôpital psychiatrique de London est un établissement pluridisciplinaire qui comporte 500 lits; affilié à l'Université Western Ontario, il offre une large gamme de services sociaux comprenant des soins internes et externes, des garderies de jour et des services de consultation aux organismes régionaux.

Le service interne «en équipe» comprend le diagnostic, le traitement intensif et des soins à long-terme pour un groupe de malades mentaux divers, âgés de plus de 16 ans. On emploie dans cette hôpital les méthodes classiques de psychiatrie, à l'aide de systèmes électroniques complexes, d'ordinateurs et d'un laboratoire de psychologie muni d'un système de télévision en circuit fermé.

Le service externe qui représente la majeure partie du travail de l'hôpital, consiste à établir les diagnostics, à traiter le malade où à l'envoyer chez un spécialiste compétent, enfin à offrir un traitement de contrôle. Une étroite collaboration entre le personnel de l'hôpital et les organismes de consultation est essentielle au traitement médical tel qu'on le conçoit dans cet hôpital.

En plus des programmes de soins psychiatriques généraux qu'offrent les quatre sections pluridisciplinaires, il existe des programmes spéciaux pour les enfants, les adolescents, les incantés pour les enfants, les problèmes judiciaires en voie de développement. Etant un hôpital d'enseignement, encouragé à faire de son mieux pour donner l'exemple durant la formation des étudiants en médecine, psychiatrie, psychologie, soins infirmiers, bien-être social et moral et ergothérapie.

## GENERAL FOODS LIMITEE

## Activités

Madame C.M. Lohmisch  
Adjoint du personnel  
C.P. 4019, Succursale «A»  
Toronto (Ontario)  
(No de Tel. 481-4211)

General Foods fait des recherches et met au point, produit et emballe de la nourriture parée, des repas légers et des repas prêts à emporter. Parmi les produits emballés figurent notamment des marques connues comme le café Maxwell House, les desserts Jell-O, les cristaux de saveur Tang, et l'entrecôte Shake N' Bake. Nous nous sommes implantés dans le marché de la nourriture à servir à l'extérieur, en achetant, à Vancouver et à Toronto, des chaînes de restaurants importantes qui ont des contrats de restauration industrielle, et des concessions de restauration à grande échelle. En outre, nous avons construit un certain nombre de restaurants «minutés» de Burger Chef dans le sud de l'Ontario et en Colombie-Britannique.

ses bureaux et usines. Il existe un programme d'emplois d'été.

#### DOMINION GLASS COMPANY LIMITED

Monsieur Andrew Falconer

Gérant de l'emploi

Cas postale 190

Montréal 101 (Québec)

#### Activités

Domition Glass Company Limited est le fabricant de bouteilles et d'articles de table en verre le plus important au Canada. Le montant des ventes, en 1970, s'est élevé à \$76,861,499. Les usines de fabrication de récipients en verre sont situées à Montréal (Québec), à Bramalea, Hamilton et Wallaceburg (Ontario), à Redcliff (Alberta) et à Burnaby (Colombie-Britannique).

Une usine moderne à Eriobicoke (Ontario) fabrique, depuis 1965, des bouteilles en plastique: polyéthylène et chlorure de polyvinyle. National Pressed Glass Limited, une filiale située à Bramford (Ontario), fabrique des articles spéciaux en verre autres que des récipients. Depuis sa création en 1913, Domition Glass s'est constamment efforcée de perfectionner les techniques et les services. En 1936, cette compagnie fut la première au Canada à utiliser le procédé de la sérigraphie (I.C.A. - Impression de couleur appliquée) pour décorer les bouteilles en verre à une échelle commerciale. En 1940, Domition Glass obtenait le droit exclusif d'utiliser au Canada la machine Hartford-Empire 'SI' (Section individuelle). Ce fut la première révolution importante en matière de formage, depuis l'apparition, en 1903, de la première machine automatisée ('Owens') pour fabriquer des bouteilles. En 1967, Power Corporation of Canada Limited, agissant principalement à titre de société de portefeuille devenait un actionnaire important de Domition Glass.

La Domition Glass a été renouée pour profiter des progrès les plus récents de l'industrie des bouteilles de verre en Amérique du Nord. Ce programme englobait toutes les usines, et parvenait à son apogée dans la nouvelle usine de Bramalea (Ontario), en septembre 1970. Tous ces perfectionnements dans les services de production, parallèlement au dynamisme et à la vigueur renouvelés des cadres des usines et à la modernisation de l'organisation des services, ont placé Domition Glass à l'avant-garde de l'industrie. Ils satisfont, en quantité et en qualité, les demandes des clients en ce qui concerne les industries des aliments (denrées et boissons), des produits de toilette, de beauté et de pharmacie.

#### Candidats Recherchés

d'enseignement qui offre des cours de 11e et  
12e année, ainsi que des cours universitaires de  
1ère et 2e année. Il est affilié à l'Université de  
l'Alberta.

### CANADA, GOUVERNEMENT DU

Le Directeur (indiquer le programme ou les  
cadres appropriés)

Commission de la fonction publique

Tour «A»

Place de Ville

Ottawa (Ontario)

#### Activités

La Commission de la fonction publique du Ca-  
nada est l'organisme de dotation en personnel  
qui, par conséquent, peut offrir la plus grande  
variété d'emplois.

La Commission a mis sur pied divers program-  
mes et cadres destinés à recruter des diplômés  
d'université de tous les niveaux, du baccalau-  
réat au doctorat. Elle recrute du personnel pour  
plus de cinquante ministères et organismes de  
l'Etat; son administration centrale se trouve à  
Ottawa, mais elle a implanté des bureaux régio-  
naux un peu partout au Canada.

#### Candidats Recherchés

Le programme de recrutement et de perfection-  
nement du personnel administratif Recrute des  
diplômés en commerce, en arts, en sciences, en  
informatique et en gestion des entreprises; son  
rôle est de doter la Fonction publique d'admi-  
nistateurs compétents et d'en assurer la relève.  
Les stagiaires en administration sont placés  
dans divers postes de formation dans maints  
secteurs de la Fonction publique. Grâce à ces  
dispositions, ils parviennent à acquérir le sens  
des responsabilités et la capacité de s'intégrer  
rapidement aux ministères et organismes de la  
Fonction publique du Canada. Les cadres des  
sciences appliquées Recrutent des ingénieurs  
dans toutes les disciplines. Les Candidats re-  
cherchés sont surtout au niveau du bachelier.

novateur dans la fabrication de précision d'al-  
liages modernes très robustes et d'alliages résis-  
tant à la corrosion et aux fortes températures.  
Elle se consacre particulièrement à la construc-  
tion des gros organes soudés de réacteurs desti-  
nés aux principaux fabricants de moteurs de  
turbines à gaz. En outre, la compagnie Bristol,  
de pair avec la fabrication de ces alliages spé-  
ciaux, étudie et fabrique du matériel de recher-  
che nucléaire. Elle s'occupe également de la  
création et de la fabrication d'éléments bobinés  
et de pièces en plastique renforcé; bacs pressu-  
risés, ogives de fusées, et autres structures utili-  
sées dans la navigation aérienne, sous-marine  
ou terrestre ainsi que dans divers projets  
expérimentaux.

Outre ses activités de construction, la compa-  
gnie Bristol, soit pour l'armée, soit pour des  
sociétés privées, se charge d'inspecter, de reme-  
tore en état ou de modifier des aéronefs de tous  
genres, partant des avions de chasse supersoni-  
ques jusqu'aux hélicoptères en passant par di-  
vers appareils civils. Toujours dans ce domaine,  
la compagnie fabrique du matériel auxiliaire:  
les patins rétractables conçus par Bristol pour  
l'hiver et les conditions polaires, les flotteurs  
d'hydravion permettant l'atterrissage sur l'eau  
et divers éléments visant à améliorer les perfor-  
mances des machines.

Les divisions techniques qui aident les services  
du matériel s'occupent des nombreux aspects  
des installations-aérions; instruments électri-  
ques, de radio, hydro-mécanique, ainsi que des  
analyses de structure et du montage des  
aéronefs.

La conception et l'élaboration des fusées  
«Black Brant» et de véhicules spatiaux destinés  
à l'exploration des couches supérieures de l'at-  
mosphère constituent l'une des activités princi-  
pales de la compagnie et nécessitent une tech-  
nologie particulièrement avancée dans tous  
les domaines.

Dans les principaux services chargés de la con-  
ception, de la propulsion, de l'équipement en  
instruments et du lancement des véhicules, des  
techniciens et des ingénieurs étudient la structu-  
re des fusées, font de la recherche sur la propul-  
sion et le vol, s'occupent du traitement et du  
coulage du propulseur, de la conception et l'éla-  
boration de l'équipement de télémétrie à bord  
des fusées ainsi que des instruments électroni-  
ques et du lancement des fusées.

Outre ces activités, certains employés sont res-  
ponsables du perfectionnement des techniques  
pour les divisions chargées de la fabrication et  
des aéronefs.

3. Vous pouvez obtenir une fiche d'information personnelle émise par l'Association des universités et collèges du Canada et vous en servir pour établir des notes biographiques. Cette fiche s'obtient au bureau de placement étudiant. Je vous conseille toutefois d'y ajouter une lettre personnelle dans laquelle vous ferez état des choses que vous connaissez de la compagnie de même que de votre préférence quant à l'emploi que vous pourriez obtenir. Assurez-vous que vos notes biographiques soient complètes et mentionnent votre formation, vos aptitudes, votre activité étudiante, vos affiliations et les postes détenus. Mieux elles seront rédigées, meilleures sont vos chances d'obtenir plus tard une entrevue.

4. La façon de procéder décrite dans le paragraphe 2 ci-dessus vous semble peut-être le meilleur moyen d'obtenir des renseignements quant aux postes disponibles et aussi que les moyens décrits au paragraphe 3 vous ouvriront la porte de plusieurs employeurs éventuels; mais tout cela, selon vous, n'est pas suffisant et vous préféreriez une approche plus personnelle. En un tel cas, une visite personnelle s'impose alors. Pour cela, trouvez le nom de la personne qui voit au recrutement des étudiants à la compagnie qui vous intéresse, rendez-vous à son bureau et demandez-lui une entrevue. Il va de soi que vous aurez alors recueilli tous les renseignements consignés au paragraphe 3 ci-dessus et que vous aurez rédigé des notes biographiques convenables. Vous ferez ainsi preuve d'initiative, qualité que votre interlocuteur ne manquera pas de noter. Cette méthode procure souvent une entrevue à l'étudiant, voire même un emploi lorsque l'employeur constate l'initiative du requérant et son désir d'être au service de sa compagnie.

5. Vous comprendrez peut-être de vous inscrire auprès du Conseil des services techniques (Technical Service Council), de l'industrie dont la tâche consiste à trouver des employés qualifiés. Il n'en coûte rien de s'inscrire, et vous pourrez peut-être trouver ainsi des entreprises qui sont à la recherche de personnes de votre qualité.

6. Vous pourriez aussi songer à entrer en communication avec des diplômés de votre établissement qui sont maintenant à l'emploi d'entreprises industrielles. De telles personnes peuvent vous être utiles sous certains rapports, vous parler de la compagnie, des conditions de travail, des chances de promotion, etc. De cette façon, vous pourrez mieux convenir de chercher ou non de l'emploi auprès de la même entreprise. En outre, ces personnes pourraient vous renseigner sur les postes vacants de l'entreprise et vous dire à qui vous devriez vous adresser pour déposer votre demande.

7. Une autre méthode de se renseigner consiste à assister aux expositions de carrières ou aux séminaires. En de telles occasions, le club étudiant ou le bureau de placement étudiant peut inviter des représentants de certaines industries à adresser la parole aux étudiants intéressés; de cette façon, vous pouvez facilement apprendre ce que ces industries ont à offrir aux récents diplômés.

Au cours de telles journées se glanent de précieuses informations. En outre, elles vous apportent l'occasion excellente d'interroger les représentants des compagnies et de vous permettre ainsi de décider sur place si telle ou telle compagnie est en mesure de vous offrir un emploi qui vous plairait.

8. Parmi tous les conseils que nous vous prodiguons dans le présent article, il en est un autre que vous ne devriez pas oublier, c'est la consultation des pages d'annonces dans les journaux sous le titre "Carrières". Nombreuses sont les industries qui annoncent de cette façon leur besoin en personnel. Vous trouverez des exemplaires de journaux dans votre bureau de placement, sûrement.

9. La Chambre de Commerce de votre milieu peut vous procurer de bons tuyaux. Vous pouvez écrire à votre Chambre locale ou vous renseigner auprès de ceux qui en sont membres. Au cours des conversations que vous tiendrez ainsi, cherchez à savoir quelles sont les industries qui auraient besoin de vos services.

10. N'oubliez pas de consulter vos amis et connaissances qui sont à l'emploi d'industries présentement. Ils peuvent vous mettre au courant des postes vacants et vous n'aurez alors qu'à poursuivre les démarches requises. A titre moi-même d'agent de placement étudiant, j'entretiens peut-être des idées préconçues; mais je ne peux m'empêcher d'insister sur le fait que votre premier et principal point de contact sera le bureau de placement étudiant de votre campus. Le personnel qui s'y trouve est là pour vous aider et je sais parfaitement qu'il s'efforcera toujours d'atteindre ce but. Les principales industries traitent avec ce bureau, cependant que celles qui ne viennent pas recruter sur les lieux renseignent le bureau quant aux postes vacants qui existent chez elles. En outre, elles ne craignent pas de bien renseigner le personnel du bureau sur leur activité, leurs besoins, etc. C'est pourquoi votre bureau de placement étudiant est un précieux atout dans la recherche d'un emploi industriel.

Les conseils que nous venons d'énumérer ne sont pas les seuls que vous pourriez considérer. Mais en les suivant, j'ai la conviction que vous ne serez pas déçu.

Enfin, il convient de tenir compte que les diplômés sont plus nombreux que les postes disponibles. C'est pourquoi, il faut être débrouillard et "à la page" pour pouvoir décrocher un emploi dans une industrie. Maintes fois, les employeurs m'ont dit qu'ils préféreraient embaucher des jeunes qui se poussent eux-mêmes, qui font preuve d'initiative et savent se présenter.

J'espère que chaque étudiant qui lira ses lignes pourra glaner des conseils qui lui seront utiles dans la recherche d'un emploi industriel. Et si certains d'entre eux allaient réussir — ce dont je ne doute pas — j'aurais la certitude d'avoir bien rempli mon devoir, car ce n'est pas chose facile aujourd'hui de faire carrière dans notre monde industriel et Les pages suivantes donnent une liste des bureaux sur campus où l'étudiant et le diplômé peuvent obtenir de l'aide.

# -FINISSANTS À -LA RECHERCHE D'EMPLOIS DANS L'INDUSTRIE

-le présent article, qui expose le chemi-  
dans la région de Hamilton (Ontario).  
du grand nombre d'industries établies

-es observations que je formule ici  
pourront, à mon avis, être utiles aux  
autres régions du pays quant à la  
méthode à mettre en œuvre pour obtenir  
un emploi dans l'industrie. Ce qui en  
effet convient à Hamilton peut sans  
doute s'appliquer ailleurs avec le même  
effet.

Il est de plus en plus évident que  
d'excellentes ouvertures s'offrent aux  
finissants dans un complexe industriel;  
acier primaire, caoutchouc, métallurgie,  
etc. Il leur appartient donc de rechercher  
ces postes qui semblent assez lucratifs.

Toutefois, notons que le nombre crois-  
sant de finissants et la conjoncture  
économique actuelle ont donné lieu à  
des malaises que les étudiants doivent  
surmonter. Je pense ici au déséquilibre  
intervenu dans les emplois offerts aux  
étudiants, ce qui pousse les employeurs  
à rechercher uniquement les premiers  
de classe, cependant que déjà ils  
étaient prêts à embaucher tout diplômé  
universitaire.

A noter également que la plupart des  
employeurs ne limitent pas leur recru-  
tement à une ou deux universités; leur  
recrutement se poursuit dans plusieurs  
universités afin de maintenir avec elles  
de bonnes relations et de pouvoir  
glaner parmi les diplômés ceux qui ont  
obtenu les meilleurs résultats.

De tels facteurs ont évidemment leur  
effet sur les chances qu'ont les étudiants  
d'obtenir un emploi dans l'industrie. Il  
importe donc qu'ils se rendent compte  
de la concurrence qui existe à l'heure  
actuelle dans le marché du travail  
industriel.

Aussi dans de telles conditions, ils  
doivent analyser et peser tous les  
moyens possibles de localiser et d'obte-  
nir l'emploi voulu dans la profession de  
leur choix.

Afin de faciliter la tâche à ces étudiants,  
j'ai dressé une liste des étapes à suivre  
dans la recherche d'un emploi. Voir  
ci-dessous.

En dressant cette liste, je me suis servi  
de renseignements obtenus des services  
du personnel de plusieurs grandes  
industries de Hamilton. J'ai aussi inter-  
rogé des personnes responsables du  
recrutement "universitaire" pour tenter  
de savoir ce qu'un étudiant devait faire  
pour augmenter ses chances d'obtenir  
un emploi, soit dans l'industrie ou soit  
dans d'autres domaines.

Les observations suivantes sont en  
conséquence le reflet de mon travail  
sous ce rapport de même que l'évoca-  
tion de mes idées personnelles sur le  
placement étudiant.

"Marche à suivre pour l'étudiant qui veut  
décrocher un emploi dans l'industrie"  
1. Consulter d'abord le bureau de  
placement étudiant du campus. Parler  
aux conseillers qui s'y trouvent pour dé-  
terminer quelles industries s'intéressent  
aux étudiants possédant vos qualifica-  
tions.

Prenez la documentation qui vous sem-  
ble utile: brochures, cahiers, feuillets  
d'information sur l'industrie concernée.  
Vous serez alors en mesure d'établir  
quels sont ses produits, les localités où  
elle est établie, etc. Noter particulière-  
ment les descriptions des emplois que  
renfermerait cette documentation; et  
efforcez-vous d'établir s'il en est parmi  
ceux-ci qui répondent à vos aspirations  
et s'harmonisent avec vos aptitudes.  
Préparez-vous également à obtenir des  
entrevues avec les compagnies qui vous  
intéressent lorsque celles-ci feront du  
recrutement sur le campus.

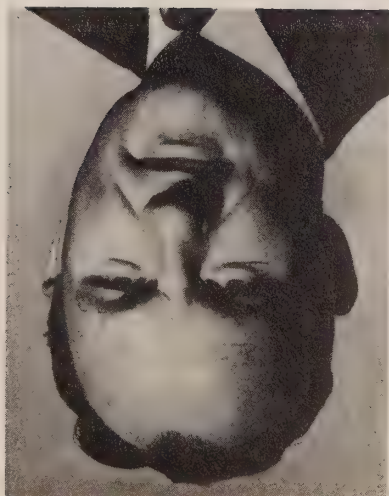

Vous devriez dresser une liste des com-  
pagnies qui vous intéressent et noter  
l'adresse, le numéro de téléphone et le  
nom de la personne qui s'occupe du  
recrutement sur le campus.

2. Téléphonez aux compagnies qui vous  
intéressent. Parlez au coordonnateur du  
recrutement universitaire, à son adjoint  
ou à celui qui est chargé de faire le  
recrutement dans les universités. Faites  
savoir à cette personne que vous êtes  
intéressé à travailler pour le compte de  
la compagnie qu'il représente. Com-  
muniquez-lui vos qualifications et l'expé-  
rience déjà acquise, s'il y a lieu. Dites-  
lui aussi que vous connaissez "sa" com-  
pagnie, que vous avez lu une certaine  
documentation à ce sujet, que vous  
connaissez les produits qu'elle fabrique,  
le lieu de son exploitation et ajoutez  
quel emploi vous pourriez occuper dans  
cette entreprise.

Un tel exposé, faisant ressortir votre  
initiative et votre assurance, poussera  
souvent l'employeur à venir vous ren-  
contrer personnellement. Dans un grand  
nombre de cas, de telles entrevues  
déboutent souvent sur l'embauchage  
subsequent de l'étudiant.

Toutefois, si l'employeur allait vous  
téléphoner pour vous dire qu'à l'heure  
actuelle, vos services ne sont pas  
requis, il vous invitera vraisemblable-  
ment à lui soumettre un curriculum vitae.  
En pareil cas, ne manquez pas de le lui  
faire parvenir: il servira lorsqu'il s'agira  
plus tard de rechercher des candidats.

# ESQUISSE BIOGRAPHIQUES BILL THOMAS

Monsieur B. Thomas est bachelier de l'université McMaster depuis 1949. Il se lança ensuite dans la direction des ventes et des relations publiques jusqu'en 1963. La même année, il entra au ministère de la Main-d'œuvre et de l'immigration, au bureau de la division des cadres de Hamilton, où il demeura en fonction jusqu'en 1965.

Subséquentement, Monsieur Thomas passa à l'université McMaster où il détient le poste de gérant du Centre de Main-d'œuvre du Canada installé sur le campus.

# LA SURVIVANCE DE L'HOMME DANS SON MILIEU

La survivance de l'homme dans son milieu dépend en grande partie de la vaste gamme des richesses naturelles qu'il lui incombe d'exploiter. Il faut d'habiles scientifiques pour situer, extraire, produire et développer ces richesses naturelles dans le but d'en tirer le meilleur profit.

L'étude de notre milieu et celle de la croûte terrestre, dont l'océanographie, la géologie et la géophysique, sont désormais parties intégrantes de l'environnement.

Sous ce rapport, le Centre des sciences de la vie créé depuis un an à l'université Dalhousie, à Halifax, renferme l'institut d'océanographie qui travaille en étroite collaboration avec le Bedford Institute, le Conseil national des recherches, le Laboratoire régional de l'Atlantique, la Station de technologie des pêches, l'établissement de recherches navales et la Fondation des recherches de la Nouvelle-Ecosse. L'institut voit principalement à former des océanographes et s'efforce de devenir un centre de recherches avancées servant à l'étude des sciences marines.

D'importantes industries, dont celles des pétroles, recherchent les services des océanographes. Toutefois, les principaux employeurs de ces spécialistes sont les universités et les organismes du gouvernement fédéral dévoués aux recherches en eaux salées ou douces.

L'intérêt dans la géologie continue de s'affermir puisque l'étude des sols et du sous-sol est essentielle à l'intelligence des forces et des éléments qui les constituent et qui ne cessent de les transformer.

Deux branches de la géologie qui touchent à l'environnement sont la géologie marine et l'hydrogéologie. Le géologue marin est surtout au service des gouvernements fédéral et provinciaux, mais certains sont à l'emploi des sociétés de prospection. Les compagnies pétrolières recherchent les géologues qualifiés dans les études de la mer pour leur confier l'exploration de gisements pétroliers et de gaz, surtout au large des côtes de la Nouvelle-Ecosse et de Terre-Neuve.

Les gouvernements, les universités et, à un moindre degré, l'industrie, se rendant compte du danger de plus en plus accentué que comporte la pénurie des eaux, recherchent des solutions à ce problème; en conséquence, ils ont recours aux services des hydrogéologues dans l'étude des eaux souterraines.

La géophysique s'oriente surtout vers l'observation scientifique de la formation et de la composition de la terre, de l'eau et de l'atmosphère. Plusieurs géophysiciens font carrière dans les compagnies minières et pétrolières, un grand nombre se dirigent vers l'exploration et les autres entrent à l'emploi des gouvernements fédéral et provinciaux. L'enseignement et la recherche sont accessibles à ceux qui détiennent un doctorat.

# ESQUISSE BIOGRAPHIQUE MME K. T. HORNE

Née à New Glasgow en Nouvelle-  
Ecosse, Mme Kay Horne est titulaire du  
baccalauréat en commerce (Economie)  
de l'Université Saint Mary's d'Halifax.  
Au cours des cinq dernières années, elle  
a dirigé le CMCU du Mont Saint-Vincent,  
à Halifax, avant d'être nommée récem-  
ment Gérante Intérimaire du CMC de  
l'Université Dalhousie.  
Avant d'entrer au Ministère, Mme Horne  
avait été au service du ministère de  
l'Environnement (Pêcheries) pendant  
six ans.

Les gens ont une vague connaissance du vétérinaire et de la nature de son travail. Nous voyons le vétérinaire comme étant quelqu'un qui prend soin de nos petits animaux ou des animaux de la ferme. Heureusement, cet article apporte un aperçu de tout ce que la profession de vétérinaire comporte. Il ne joue pas seulement un rôle important dans la prévention et le traitement des maladies animales, mais il participe activement aux recherches portant sur la santé de l'homme. Jeter un regard sur les découvertes faites par les vétérinaires, c'est constater jusqu'à quel point ils ont aidé le genre humain. Ce fut un vétérinaire qui découvrit que les insectes transportaient des microbes chez les animaux, et ensuite des animaux à l'homme. Cette découverte permit alors la conquête de la fièvre jaune, la malaria, et le typhus "tick-borne". Un vétérinaire, dans ses recherches sur la cause des tréfiles sucrés qui empoisonnaient le bétail, a créé le dicummarol anti-coagulant qui sert maintenant au traitement de maladies du cœur humain. Un vétérinaire est responsable de la découverte du botulisme (nourriture empoisonnée) qui conduisit à la création de l'industrie des conserves. Un des moyens d'immobiliser les fractures, qu'utilisent désormais les spécialistes des os, est l'œuvre d'un vétérinaire. Le diligent travail des vétérinaires a grandement réduit l'hydrophobie et sauvé ainsi d'innombrables vies humaines. Voilà seulement quelques-unes des réalisations que nous devons aux vétérinaires.

La suite de cet article donne un aperçu de ce que l'étudiant ou l'étudiante doit absorber durant les quatre années du cours pré-dé. La première année est consacrée à l'étude des sciences vétérinaires de base pour apprendre et connaître la structure normale et le fonctionnement du corps de l'animal. L'étudiant étudie ensuite les disciplines suivantes: anatomie vétérinaire — comparable à l'étude anatomique de tous les animaux domestiques: os — muscles — organes digestifs — cœur — nerfs etc.; physiologie vétérinaire — l'étude de la fonction de chacune des parties du corps; microbiologie vétérinaire — l'étude des bactéries qui peuvent envahir le corps et causer des maladies: virus, parasites, levures, moisissures et l'immunologie. La pathologie vétérinaire étudie les anomalies de la structure et du fonctionnement produites par la maladie et son processus. Les vétérinaires viennent aussi à décoder et prévenir les maladies; de même leur apprend-on les diagnostics de clinique, la chirurgie, l'application d'une anesthésie, l'utilisation d'un électrocardiogramme, l'électro-encéphalographie et l'usage d'un équipement respiratoire et de radiologie. Quelques vétérinaires peuvent se spécialiser dans un domaine particulier tel la pratique sur petits animaux: ils se préoccupent alors des animaux comme le chien, le chat et les autres animaux familiers; pratique sur les gros animaux: les vaches, (vache laitière ou bœuf), moutons, porcs, volailles. C'est là un aspect très important du travail du vétérinaire puisqu'il s'agit de l'homme et nissent de la viande à l'homme et d'autres produits, tels, par exemple, les produits laitiers. En conséquence, une production de qualité venant d'animaux sains est très importante pour chacun de nous.

Médecine vétérinaire chevaline — La

recrudescence que connaît l'équitation depuis quelques années a poussé des vétérinaires à se spécialiser dans cette discipline et ainsi démontrer la diversité de travail que comporte cette profession.

Les gouvernements fédéral et provinciaux recherchent les services de ces diplômés qui œuvrent alors dans le domaine de la santé publique où ils travaillent à la régulation de la zoonomie, c'est-à-dire le contrôle des maladies que les bêtes peuvent transmettre à l'homme. Ils voient en outre à la santé des animaux familiers; à la prévention des maladies chez les animaux destinés à l'alimentation humaine; à la vérification de nouveaux médicaments; à l'inspection des viandes; et de même à veiller que n'entrent pas au pays des animaux malades. Ils s'efforcent aussi de prévenir et de maîtriser les maladies qui peuvent frapper les animaux sauvages de notre pays. Les recherches que les vétérinaires exécutent en ce domaine ont déjà donné de bons résultats, autant pour la santé de l'homme que pour celle des bêtes. On verra peut-être à l'avenir la création d'une science vétérinaire en pisciculture, à mesure que le Canada, de concert avec d'autres pays, augmentera ses pêches, sources importantes de protéines. Puisque la pollution nous concerne tous, elle n'échappe pas non plus aux vétérinaires. Ils doivent en conséquence veiller à ce que ne soient empoisonnés les poissons, les animaux domestiques ou sauvages, les oiseaux et autres éléments de notre faune. L'homme aussi doit se prémunir contre de tels dangers. Qu'est-ce à dire maintenant des occasions d'emploi dans cette profession? Précisons que les vétérinaires sont en demande partout dans le monde et spécialement dans les pays en voie de développement où les maladies de l'homme et des bêtes exigent encore beaucoup de soins. Le Canada compte environ 2,200 vétérinaires auxquels viendront s'ajouter cette année quelque 170 diplômés. En dépit de ce nombre, la demande de vétérinaires au Canada est très forte; elle continuera de l'être encore durant de nombreuses années, et particulièrement dans l'économie agricole des provinces de l'Ouest.

# ESQUISSE BIOGRAPHIQUE

## WILF HIEBERT

Monsieur Wilf Hiebert est présentement gérant du Centre de main-d'œuvre à l'université de Saskatchewan. Il entra à l'emploi du ministère de la Main-d'œuvre et de l'immigration en 1969 après avoir obtenu son baccalauréat en sciences à l'université de Saskatchewan. Avant d'être nommé gérant, monsieur Hiebert était conseiller en main-d'œuvre au CMC de cette université.

# PERSPECTIVES DE CARRIÈRES – MÉDECINE VÉTÉRINAIRE

Trois universités seulement au Canada offrent des cours en médecine vétérinaire: l'université de Montréal (St-Hyacinthe), l'université de Guelph et l'université de Saskatchewan à Saskatoon. Le plus récent, le *Western College of Veterinary Medicine* à l'université de Saskatchewan, est l'un des

plus moderne et est à l'avant-garde de l'enseignement des sciences fondamentales qui visent au traitement des animaux malades. Il est considéré comme étant le meilleur et de loin le mieux outillé en Amérique du Nord pour l'enseignement de la médecine vétérinaire.

L'établissement et la construction de ce collège constituent un merveilleux exemple de collaboration entre les universités des provinces de l'Ouest et les gouvernements provinciaux et fédéral. western universities and the federal and provincial governments.

# EMPLOIS QUE L'ENVIRONNEMENT PEUT OFFRIR AUX DIPLOMÉS

Si le diplômé au cours de ses années d'études a été lui-même le principal artisan de sa formation, il devra, au terme de ses études, assumer la pleine responsabilité de faire le choix entre l'exercice d'une profession et la poursuite d'une carrière dans le monde du travail.

Dans une première étape, le diplômé décidera assez facilement entre la profession de son choix ou une carrière qu'il pourra poursuivre dans le domaine de l'industrie, du commerce ou du fonctionnarisme. S'il choisit cette dernière alternative, voyons un peu quelles perspectives de carrière le fonctionnarisme peut lui offrir et voyons aussi comment il pourra arriver à appliquer les connaissances acquises au cours de ses études.

Si le choix d'un de ces grands secteurs a été relativement facile, les décisions subséquentes deviendront de plus en plus difficiles, au fur et à mesure qu'il faudra préciser le domaine d'activités qui s'avèrera le mieux approprié à l'application de ses connaissances.

Comment le diplômé peut-il faire valoir ses compétences avant d'en avoir fait l'inventaire, compte tenu du même coup de sa personnalité, et de l'expérience acquise au cours de ses années d'études? Dans la préparation de ce bilan, le diplômé qui aura mis toutes ses chances de succès du bon côté et qui aura déjà entrevu la carrière pour laquelle il s'est préparé, réussira probablement.

Par contre, il risquera peut-être de se voir refuser tel ou tel emploi lorsque ses connaissances ne correspondront pas aux exigences de l'emploi qu'il sollicite.

Une fois son inventaire terminé, le diplômé commencera à explorer dans le fonctionnarisme quels ministères poursuivent les activités qui s'harmonisent le mieux à ses talents. Considérons, par exemple, le ministère de l'Environnement et voyons dans quelle mesure ses activités favorisent l'ensemble des disciplines ou certaines disciplines en particulier.

Le ministère de l'Environnement comprend des secteurs de services notamment: le service de pêches; celui des terres et forêts et de la faune; de la planification et recherche de la politique; de la gestion des eaux; de la protection de l'environnement en général; de la protection de l'environnement atmosphérique; de la finance et de l'administration.

Assurément, le diplômé en comptabilité, en finance ou en administration découvrira un choix de possibilités dans ce dernier secteur, comme dans la majorité des autres secteurs évidemment.

Par contre, l'ingénieur, quelle que soit sa spécialisation, ne trouvera-t-il pas aussi toute une gamme de possibilités dans les secteurs du service des pêches, de la gestion des eaux et autres? Quelle contribution le diplômé en génie civil, génie forestier, génie chimique ou mécanique peut-il apporter au développement de nos richesses naturelles, à la conservation ou l'exploitation de nos forêts, nos lacs et nos rivières? C'est en répondant à une série de questions semblables que le diplômé parviendra à préciser la carrière qu'il aimerait se tailler au sein du fonctionnarisme.

Le service hydrographique, par ailleurs, est toujours à la recherche de diplômés en mathématiques et en physique. Celui qui optera pour ce genre de service aura l'avantage de compléter un stage de perfectionnement en divers endroits pour se voir offrir par la suite un poste de commande au sein du ministère.

Les secteurs de service ayant trait aux pêches, aux terres et forêts, à l'environnement et à la gestion des eaux offrent des perspectives de carrières particulièrement intéressantes pour les diplômés en biologie, zoologie, ichthyologie, ornithologie, sylviculture, chimie, biochimie ou ailleurs, voilà autant de défis que se présentent aux diplômés dans ces disciplines.

En ajoutant à toutes ces perspectives le travail que comporte la lutte contre la pollution, et la protection de la vie qui bat dans notre environnement, il ne fait aucun doute que les spécialistes en écologie, en anthropologie, voire même les juristes pourront trouver des débouchés dans ce ministère.

Développer nos richesses naturelles, lutter pour prévenir la destruction des espèces, enrayer des pratiques qui favorisent la pollution ou déterminer le degré de nocivité de certains pesticides ou insecticides, n'est-ce pas là également l'occasion de contribuer au développement de nos ressources, et faire carrière dans un ministère qui a beaucoup à offrir.

# ESQUISSE BIOGRAPHIQUE FERNAND M. VILLEMMAIRE

Né à Bourget en banlieue d'Ottawa en 1917, M. F. Villemaire a entrepris ses études classiques au Séminaire d'Ottawa pour les terminer à l'Université d'Ottawa en 1938. Il devrait y retourner quelques années plus tard pour y ajouter des études en biologie et en gestion du personnel.

Au sortir de l'université, il faisait l'acquisition d'un commerce de produits alimentaires pour passer plus tard au commerce d'hôtellerie. En 1963, il entra au service de la Main-d'œuvre à l'Université d'Ottawa. "Retourner à son université après trente ans pour servir d'autres étudiants, c'est renouer connaissance avec un passé qui m'est particulièrement cher," a déclaré M. Villemaire quant on lui a demandé d'écrire l'article ci-joint.

# BOURSES D'ÉTUDES, BOURSES D'ENTRETIEN ET PRÊTS

Le fardeau financier de l'étudiant d'université devient de plus en plus difficile à porter. Il est cependant possible d'obtenir une aide financière de plusieurs sources, mais surtout des programmes de prêts des gouvernements. Précisons que beaucoup d'universités, d'organismes, d'associations et de personnes intéressées à l'éducation accordent des bourses d'études, des bourses d'entretien et des prêts qui permettent d'alléger ce fardeau financier.

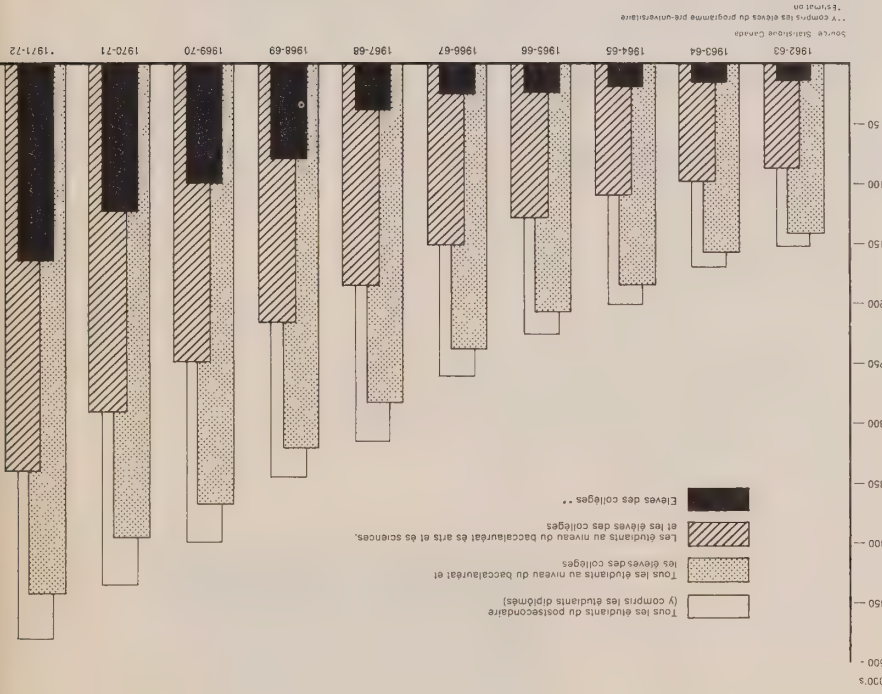

Dans une publication intitulée "Bourses de recherches et d'études supérieures", le Bureau fédéral de la statistique donne une liste des bourses qui sont à la disposition des personnes désireuses d'entreprendre des études supérieures. Comme il arrive souvent qu'une bourse soit adjugée à plus d'une personne à la fois, le nombre d'étudiants qui en bénéficient est donc plus élevé qu'on ne le croirait de prime abord. De plus, beaucoup d'organismes qui accordent de telles bourses en adjugent également à des candidats au premier grade.

Il existe de nombreuses sources pour obtenir une bourse d'entretien, mais la plus importante est certainement l'université elle-même. Toutes, ou presque toutes les universités canadiennes, accordent des bourses d'entretien.

Outre ces bourses, dont la plupart ne sont pas remboursables, une autre aide financière est mise à la disposition des étudiants. L'université possède généralement une petite caisse de réserve destinée aux prêts à court terme (généralement exempts d'intérêt) pour les cas d'urgence. Le programme canadien de prêts aux étudiants mis en application par les provinces, garantit les prêts accordés aux étudiants admissibles et paie l'intérêt jusqu'à ce qu'ils aient terminé leurs études. Tout en étant une source d'argent appropriée, ce programme permet de faire bénéficier les étudiants d'un taux d'intérêt avantageux. Pour obtenir des renseignements au sujet des bourses d'études, des bourses d'entretien et des prêts, prière de vous adresser au responsable de l'aide financière dans toute université.

# INTRODUCTION

Graphique 1  
Inscriptions aux universités et aux collèges du Canada  
de 1962-1963 à 1971-1972\*

L'annuaire contient trois articles vedettes composés par des géants de Centres de Main-d'oeuvre du Canada d'abord de profils d'employeurs, de descriptions de leurs affaires ou de leurs activités et des diplômés qu'ils recherchent selon le niveau d'étude.

Les index et les recoupements visent à faciliter l'utilisation des renseignements disponibles concernant les employeurs et les occasions d'emploi. C'est pour quoi aussi, un guide, intitulé "Comment utiliser l'annuaire", apparaît à la page iv. Les fréquents changements dans le concept même de l'université ou du collège et de leurs étudiants, rend la tâche difficile lorsqu'il s'agit de calculer les avantages et les tendances vers l'immatriculation, à moins de jeter un regard sur le total de tous les étudiants du post-secondaire. Ce total a augmenté de près de 12 pour cent, c'est-à-dire des 430,000 de l'année académique 1970-1971 ils atteignent 480,000 en 1971-1972. Les chiffres de 1971-1972 comprennent à peu près 310,000 étudiants à l'université et 170,000 élèves dans les collèges.

Le graphique représente les inscriptions aux établissements canadiens d'études supérieures pour les années universitaires 1971-1972. Il importe de remarquer que les inscriptions aux collèges n'ont subi qu'une légère hausse d'année en année jusqu'à l'année scolaire 1966-1967, alors que les inscriptions aux différents niveaux de grade ont continué à augmenter. Cependant, l'année scolaire 1967-1968 à celle de 1970-1971, les inscriptions aux collèges ont subi une augmentation sensiblement supérieure à celle qu'ont connue les inscriptions aux universités durant la même période, à cause de la fusion de certains établissements d'enseignement supérieur et de quelques collèges. Cette situation est surtout particulière à la province de Québec où la majorité des élèves des CEGEP suivent en fait des programmes pré-universitaires et peu-vent poursuivre des études universitaires à la sortie du CEGEP.

Le Canada, comme bien d'autres pays, est en pleine évolution. Plus que jamais, tout est contesté et remis en question. En même temps, l'individu lutte pour garder son identité en cette période de renouvellement accéléré des techniques.

C'est à vous, les jeunes, qu'il incombe de relever le défi que pose une telle évolution. Il vous faut savoir conserver ce que le passé avait de bon, et par ailleurs, trouver des idées et des concepts neufs qui permettront aux Canadiens de vivre dans une démocratie de participation en profitant des nombreux avantages offerts par notre pays.

Cet annuaire, qui dresse une liste variée de nombreux employeurs éventuels, a été conçu pour vous aider à choisir un emploi qui corresponde à votre compétence. Je veux croire que le choix que vous ferez vous permettra d'accéder à une carrière avantageuse et enrichissante.

A handwritten signature in dark ink, appearing to read "Bryce Mackasey". The signature is fluid and cursive.

Bryce Mackasey, Ministre

Ottawa  
1972

# COMMENT UTILISER L'ANNUAIRE

L'annuaire contient trois sections principales : une section narrative, une liste alphabétique des employeurs canadiens et une série d'index (recoupe-ment) servant de guide à la liste des employeurs.

Chaque inscription de la liste alphabétique renferme le nom d'un employeur, son adresse, le nom du responsable du recrutement des diplômés, et une brève description de l'employeur. Dans la mesure du possible, nous avons utilisé un format standard pour toutes les descriptions d'employeurs.

Chaque description contient trois rubriques principales, à part le nom et l'adresse de l'employeur : "Activités", "Candidats recherchés" et "Renseignements généraux". "Activités" décrit ce que fait l'employeur, "Candidats recherchés" donne une liste des domaines d'études et des niveaux de diplôme exigés des candidats éventuels, et "Renseignements généraux" contient les autres renseignements pertinents. Autant que possible, les seules abréviations utilisées ont été "B", "B-G", "B-S", "M", "D" et "E" signifiant respectivement baccalauréat, baccalauréat-général, baccalauréat avec spécialisation, maîtrise, doctorat et emploi d'été. Cependant, quelques phrases types utilisées tout au long de l'annuaire peuvent exiger des précisions.

Lorsqu'on parle d'emploi d'été, on ne parle que de travail dans une discipline connexe aux études du candidat. L'employeur peut engager des étudiants en vacances pour travailler dans d'autres secteurs, mais cela ne peut être établi à partir des renseignements contenus dans l'annuaire.

Les références aux exigences linguistiques d'un employeur n'ont pas trait à la langue maternelle du candidat. Quand il est dit que l'employeur veut du "personnel de langue française" ou du "personnel de langue anglaise", cela ne veut pas dire ou laisser supposer que la langue maternelle du candidat doit être l'anglais ou le français.

L'index des employeurs est recoupé de trois façons :

- 1) selon la nature de l'entreprise;
- 2) selon la discipline et le diplôme exigé; et
- 3) selon la ville et la province.

Si vous connaissez le nom d'un employeur à qui vous désirez présenter une demande d'emploi, vous n'avez qu'à chercher son nom dans la liste alphabétique. Cependant, si vous vous intéressez à n'importe quel employeur qui veut engager des diplômés dans votre domaine d'études, ou à un employeur dans un genre particulier de travail, ou à un employeur situé dans une province ou une ville en particulier, vous pouvez alors consulter l'index (recoupement). Le détail des recoupe-ments est consigné à la table des matières, à la page II.

# AVANT-PROPOS

Le présent annuaire se propose principalement de fournir aux diplômés des universités et aux agents de placement des renseignements sur les possibilités d'emploi au Canada. L'annuaire est également distribué aux étudiants canadiens à l'étranger et aux agents d'outre-mer du Ministère de la Main-d'œuvre et de l'immigration. La Division des professions libérales et techniques met à jour d'autres publications concernant l'éducation post-secondaire, lesquelles incluent: Université, Perspectives de Carrières; Collège, Perspectives de Carrières; Nouveaux diplômés d'université — Offre et demande; Demande et salaires — Diplômés d'université; Demande et salaires — Diplômés de collège. Tout commentaire ou toute proposition que vous auriez à nous offrir en vue d'améliorer le présent annuaire, doivent être adressés à: La Section des besoins en diplômés Division des professions libérales et techniques Ministère de la Main-d'œuvre et de l'immigration OTTAWA K1A-0J9, Ontario

# TABLE DES MATIÈRES

III	Avant-propos
IV	Comment utiliser l'annuaire
V	Lettre du Ministre
VI	Introduction
VII	Bourses d'étude, bourses d'entretien et prêts
IX	Emplois que l'environnement peut offrir aux diplômés
	Perspectives de carrières — Médecine
X	vétérinaire
XIII	La survivance de l'homme dans son milieu
	Finissants à la recherche d'emplois dans l'industrie
XV	Centres de Main-d'œuvre du Canada (sur le campus) et bureaux de placement et d'orientation professionnelle des étudiants
